LaTeX Class for the *Association for Computing Machinery**

Boris Veytsman†

2025/08/27, v2.16

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

3.31 End of Class . . . 119

1 Introduction

The Association for Computing Machinery[1] is the world's largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of TEX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This new consolidated template package replaces all previous independent class files and packages and provides a single up-to-date LaTeX package with optional calls. The package uses only free TEX packages and fonts included in TEXLive, MikTEX and other popular TEX distributions. The new ACM templates use a new font set (libertine) which will need to be installed on your machine before using the templates. Please download and install the libertine font set before writing your paper. Fonts used in the template cannot be substituted; margin adjustments are not allowed.

I am grateful to Michael D. Adams, Leif Andersen, Lawrence Christopher Angrave, Dirk Beyer, Andrew Black, Joachim Breitner, Yegor Bugayenko, Benjamin Byholm, John Collins, Roberto Di Cosmo, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Ulrike Fischer, Jason Hemann, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kuldeep S. Meel, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Scott Pakin, Tobias Pape, Henning Pohl, Philip Quinn, Mathias Rav, Andreas Reichinger, Matteo Riondato, Craig Rodkin, Bernard Rous, Feras Saad, Kerry A. Seitz, Jr., M Senthilkumar, David Shamma, Gabriel Scherer, Kartik Singhal, Christoph Sommer, Stephen Spencer, Shin Hwei Tan, Daniel Thomas, Shari Trewin, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at https://github.com/borisveytsman/acmart.

2 User's guide

This class uses many commands and customizaton options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at https://github.com/borisveytsman/acmart, https://tex.stackexchange.com or the closest TEX Users Group. The world-wide TEX Users Group is at https://tug.org/; please consider joining us if you use TEX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite TEX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: https://www.ctan.org/pkg/acmart. The development version can be found on GitHub: https://github.com/borisveytsman/acmart. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

[1] http://www.acm.org/

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their TEX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls`, `acm-jdslogo.png`, and `ACM-Reference-Format.bst` in places where LATEX can find them (see [1] or the documentation for your TEX system).
3. Update the database of file names. Again, see [1] or the documentation for your TEX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major TEX distributions (TEXLive, MacTEX, MikTEX) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- *amsart*, https://ctan.org/pkg/amsart,
- *babel*, https://ctan.org/pkg/babel,
- *balance*, https://ctan.org/pkg/balance,
- *booktabs*, https://ctan.org/pkg/booktabs,
- *caption*, https://ctan.org/pkg/caption,
- *cmap*, https://ctan.org/pkg/cmap,
- *comment*, https://ctan.org/pkg/comment,
- *doclicense*, https://ctan.org/pkg/doclicense,
- *draftwatermark*, https://ctan.org/pkg/draftwatermark,
- *environ*, https://ctan.org/pkg/environ,
- *etoolbox*, https://ctan.org/pkg/etoolbox,
- *fancyhdr*, https://ctan.org/pkg/fancyhdr,
- *float*, https://ctan.org/pkg/float,
- *fontenc*, https://ctan.org/pkg/fontenc,
- *framed*, https://ctan.org/pkg/framed,
- *geometry*, https://ctan.org/pkg/geometry,
- *graphicx*, https://ctan.org/pkg/graphicx,

- *hyperref*, https://ctan.org/pkg/hyperref,
- *hyperxmp*, https://ctan.org/pkg/hyperxmp,
- *iftex*, https://ctan.org/pkg/iftex,
- *libertine*, https://ctan.org/pkg/libertine,
- *manyfoot*, https://ctan.org/pkg/manyfoot,
- *microtype*, https://ctan.org/pkg/microtype,
- *natbib*, https://ctan.org/pkg/natbib,
- *newtxmath*, https://ctan.org/pkg/newtxmath,
- *pbalance*, https://ctan.org/pkg/pbalance,
- *refcount*, https://ctan.org/pkg/refcount,
- *setspace*, https://ctan.org/pkg/setspace,
- *totpages*, https://ctan.org/pkg/totpages,
- *unicode-math*, https://ctan.org/pkg/unicode-math,
- *xcolor*, https://ctan.org/pkg/xcolor,
- *xkeyval*, https://ctan.org/pkg/xkeyval,
- *xstring*, https://ctan.org/pkg/xstring,
- *zi4*, https://ctan.org/pkg/zi4,
- *zref-savepos*, https://ctan.org/pkg/zref-savepos,
- *zref-user*, https://ctan.org/pkg/zref-user.

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[⟨options⟩]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have `key=value` forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Table 1: The possible values for the `format` option

Value	Meaning
`manuscript`	A manuscript. This is the default.
`acmsmall`	Small single-column format. Used for ACMJCSS, ACMJDS, AILET, CIE, CSUR, FAC, GAMES, JACM, JATS, JDIQ, JDS, JEA, JERIC, JETC, JRC, PACMCGIT, PACMHCI, PACMMOD, PACMNET, PACMPL, PACMSE, POMACS, TAAS, TACCESS, TACO, TAIS, TAISAP, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, TELO, THRI, TIIS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPML, TOPS, TORS TOS, TOSEM, TOSN, TQC, TRETS, TSAS, TSC, TSLP, and TWEB, including special issues.
`acmlarge`	Large single-column format. Used for DLT, DTRAP, HEALTH, IMWUT, JOCCH, and TAP, including special issues.
`acmtog`	Large double-column format. Used for TOG, including annual conference Technical Papers.
`sigconf`	Proceedings format for most ACM conferences (with the exception of SIGPLAN) and all ICPS volumes.
`sigplan`	Proceedings format for SIGPLAN conferences.
`acmengage`	ACM EngageCSEdu Course materials.
`acmcp`	ACM cover page.

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals, transactions, and course materials, while formats starting with `sig` are intended for proceedings published as books.

Sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format. The templates `sample-acmsmall-conf.tex` and `sample-acmtog-conf.tex` show how to enter conference information. Note that you need to comment out `\acmJournal{...}` line for such papers to get the conference information in the footers and headers.

Starting in 2020, ACM retired formats `sigchi` and `sigchi-a`. SIGCHI conferences now use `sigconf` format for their publications. If a file uses `sigchi` format, a warning is issued, and the format is automatically switched to `sigconf`. Format `sigchi-a` can be used for non-ACM documents only (see Section 2.22). The format `acmcp` is used for ACM cover pages discussed in Section 2.5.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

Two samples in the `samples` directory, `manuscript` and `acmsmall-submission`, show manuscripts formatted for submission to ACM.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding BibTeX style is based on `natbib`. In most cases you do not need to set it. See Section 2.14.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

The option `authordraft` is intended for author's drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase "Unpublished working draft. Not for distribution.", which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overriden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. When there are many figures near the end of the document, the attempts to balance columns may lead to the loss of the figures. Set this option to `false` if you encounter problems. An alternative is the (experimental) option `pbalance`, which uses the new package `pbalance`. You may want to try `pbalance=true` to see if you get better results.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is true. Set it to `false` to disallow these breaks.

The option `language` is used to define the languages for the multi-language papers. It is discussed in Section 2.6.

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be used before `\maketitle`.

This class internally loads the `amsart` class, so many top-matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{`⟨*shortName*⟩`}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.14)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers. Currenly such documents allow only a Creative Commons license.
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.10
balance	true	Whether to balance the last page in two column mode
pbalance	false	Whether to balance the last page in two column mode using pbalance package
urlbreakonhyphens	true	Whether to break urls on hyphens

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

\acmConference The macro \acmConference[⟨*short name*⟩]{⟨*name*⟩}{⟨*date*⟩}{⟨*venue*⟩} is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November
12--16}{Dallas, TX, USA}
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

\acmBooktitle By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command \acmConference above. However, sometimes the book title is different. The command \acmBooktitle can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the
Art, Science and Engineering of Programming (Programming '17)}
```

An ACM paper should have either \acmJournal or \acmConference command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command \acmConference in a journal format like acmsmall, the class will use conference format for bibstrip and reference citation formatting. In the samples directory there is a file sample-acmsmall-conf.tex with the example of this usage.

An ACM Engage material should *not* use \acmJournal or \acmConference command. It may use \acmBooktitle to override the default *ACM EngageCSEdu*. It should use \acmYear to set the date of the material.

\editor In most cases, conference proceedings are edited. You can use the command \editor{⟨*editor*⟩} to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}
\editor{Theo D'Hondt}
\editor{Wolfgang De Meuter}
```

\title The command \title, as in the amsart class, has two arguments: one optional, and one mandatory:

\title[⟨*ShortTitle*⟩]{⟨*FullTitle*⟩}

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

\subtitle

Besides title, ACM classes allow a subtitle, set with the `\subtitle{⟨subtitle⟩}` macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

\author
\orcid
\affiliation
\email

The basic commands are `\author`, `\orcid` (for the researchers registered with ORCID, http://www.orcid.org/), `\affiliation` and `\email`. In the simplest case, you enter them in this order:

```
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
```

Do *not* use the LaTeX `\and` macro or commas, or `\\` between the authors! Each author deserves his or her own `\author` command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

ACM strongly encourages that you include ORCIDs for all authors before compiling or submitting for review and/or production processing.

If you do not have an ORCID, you may get one for free by registering at http://www.orcid.org/.

Sometimes an author has several affiliations. In this case, the `\affiliation` command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the `\email` command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2, while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3, etc.). The recommended solution is to put the `\affiliation` commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
```

```
\affiliation{...}
\affiliation{...}
\email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

\additionalaffiliation In some cases, too many affiliations can take too much space. The command \additionalaffiliation{⟨*affiliation*⟩} creates a footnote after an author's name with the words "Also with {⟨*affiliation*⟩}". You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
  \institution{The Th{\o}rv{\"a}ld Group}
  \city{Hekla}
  \country{Iceland}}
\affiliation{%
  \institution{Institute for Clarity in Documentation}
  \city{Dublin}
  \state{Ohio}}
```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Thørväld Group.

\position \institution \department \city \state \country The \affiliation and \additionalaffiliation commands are further structured to interact with the metadata extraction tools. Inside these commands you should use the \position, \institution, \department, \city, \state, and \country macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or \\ between the elements of \affiliation. They will be provided automatically.

The fields \institution, \city and \country are mandatory. If they are not provided, an error or a warning is issued. Currently the absence of \country produces an error; ACM may change this in the future.

Starting 2024, ACM no longer collects or print postal addresses of the authors. Thus the commands \streetaddress and \postcode, present in the previous versions of the class, now produce a warining.

An example of the author block:

```
\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
  \institution{University of New South Wales}
```

```
  \department{School of Biomedical Engineering}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
  \institution{University of Pennsylvania}
  \city{Philadelphia}
  \state{PA}
  \country{USA}}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same insitution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command `\department` several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
  \department[0]{Department of Lunar Studies} % 0 is the default
  \department[1]{John Doe Institute} % higher than 0
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

and

```
\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

`\thanks` Like `amsart` (and unlike standard LaTeX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.13).

`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default

LaTeX typesets them itself using the information you give it. However, you can override its choice using the commmand \authorsaddresses{⟨*contact addresses*⟩}, for example,

```
\authorsaddresses{%
 Authors' addresses: G.~Zhou, Computer Science Department, College of
 William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
 V.~B\'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
 A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
 Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
 Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
 Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
 of Virginia, School of Engineering Charlottesville, VA 22903, USA;
 T. F. Abdelzaher, (Current address) NASA Ames Research Center,
 Moffett Field, California 94035.}
```

You can *suppress* printing authors' addresses by setting them to an empty string: \authorsaddresses{}. Please note that authors' addresses are mandatory for journal articles.

\titlenote
\subtitlenote
\authornote

While the command \thanks generates a note without a footnote mark, sometimes the authors might need notes more tightly connected to the title, subtitle or author. The commands \titlenote, \subtitlenote and \authornote that follow the corresponding commands (\title, \subtitle and \author) generate such notes. For example,

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

Please never use a \footnote inside an \author or \title command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

\authornotemark

Sometimes one may need to have the same footnote connected to several authors. The command \authornotemark[⟨*number*⟩] adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

\acmVolume
\acmNumber
\acmArticle
\acmYear
\acmMonth

The macros \acmVolume, \acmNumber, \acmArticle, \acmYear and \acmMonth are inserted by the editor and set the journal volume, issue, article number, year and month corrspondingly. The arguments of all these commands, including \acmMonth, is numerical. For example,

```
\acmVolume{9}
\acmNumber{4}
\acmArticle{39}
\acmYear{2010}
\acmMonth{3}
```

Note that \acmArticle is used not only for journals but also for some conference proceedings.

\acmArticleSeq The articles in the same issue of a journal have a *sequence number*. By default it is the same as the article number, but the command \acmArticleSeq{⟨*n*⟩} can be used to change it:

```
\acmArticle{39}   % The sequence number will be 39 by default
\acmArticleSeq{5} % We redefine it to 5
```

\acmSubmissionID If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

\acmISBN Book-like volumes have ISBN numbers attached to them. The macro \acmISBN{⟨*ISBN*⟩} sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as \acmISBN{}, suppresses printing the ISBN.

\acmDOI The macro \acmDOI{⟨*DOI*⟩} sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as \acmDOI{}, suppresses the DOI.

\acmBadge Some conference articles get special distinctions, for example, the artifact evaluation for PPoPP 2016 (see http://ctuning.org/ae/ppopp2016.html). These articles display special badges supplied by the conference organizers. This class provides command to add these badges: \acmBadge[⟨*url*⟩]{⟨*graphics*⟩}. The arguments have the following meaning: [⟨*url*⟩], if provided, sets the link to the badge authority in the screen version, while {⟨*graphics*⟩} sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is ae-logo.pdf, the command is

```
\acmBadge[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

The command can be repeated, if a paper has several badges.

\startPage The macro \startPage{⟨*page*⟩} sets the first page of the article in a journal or book. It is used by the typesetter.

\terms \keywords The command \keywords{⟨*keyword, keyword,…*⟩} sets keywords for the article. They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,
multi-channel, radio interference, time synchronization}
```

CCSXML (*env.*) \ccsdesc ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in the metadata in various databases. Therefore you need to provide both TEX commands and XML metadata with the paper.

The tool at http://dl.acm.org/ccs.cfm can be used to generate CCS codes. After you select the topics, click on "Generate CCS codes" to get results like the following:

```
\begin{CCSXML}
<ccs2012>
 <concept>
  <concept_id>10010520.10010553.10010562</concept_id>
  <concept_desc>Computer systems organization~Embedded systems</concept_desc>
  <concept_significance>500</concept_significance>
 </concept>
 <concept>
  <concept_id>10010520.10010575.10010755</concept_id>
  <concept_desc>Computer systems organization~Redundancy</concept_desc>
  <concept_significance>300</concept_significance>
 </concept>
 <concept>
  <concept_id>10010520.10010553.10010554</concept_id>
  <concept_desc>Computer systems organization~Robotics</concept_desc>
  <concept_significance>100</concept_significance>
 </concept>
 <concept>
  <concept_id>10003033.10003083.10003095</concept_id>
  <concept_desc>Networks~Network reliability</concept_desc>
  <concept_significance>100</concept_significance>
 </concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}
```

You just need to copy this code and paste it in your paper anywhere before `\maketitle`.

CCS Concepts and user-defined keywords are required for all articles over two pages in length, and are optional for one- and two-page articles (or abstracts).

`\setcopyright` There are several possibilities for the copyright of the papers published by the ACM: the authors may license the paper to the ACM, some or all authors might be employees of the US or Canadian governments, etc. Accordingly the command `\setcopyright{...}` is introduced. Its argument is the copyright status of the paper, for example, `\setcopyright{acmcopyright}`. The possible values for this command are listed in Table 3. This command must be placed in the preamble, before `\begin{document}`. Additional information about ACM copyright rules is discussed in Section **??**.

`\setcctype` If Creative Commons license is used, the package by default chooses CC-BY 4.0 Attribution 4.0 International license. You can override this choice by the command `\setcctype[`⟨*version*⟩`]{`⟨*type*⟩`}`, where `[`⟨*version*⟩`]` can be either 3.0 or 4.0 (4.0 by default), and `{`⟨*type*⟩`}` can be one of `zero`, `by`, `by-sa`, `by-nd`, `by-nc`, `by-nc-sa`, `by-nc-nd` (see https://creativecommons.org/licenses/ for the explanation). This command should be used in the preamble only.

Material published under Creative Commons license should include the correspond-

Table 3: Parameters for the \setcopyright command

Parameter	Meaning
none	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
acmlicensed	The authors retain the copyright but license the publication rights to ACM.
rightsretained	The authors retain the copyright and publication rights to themselves or somebody else.
usgov	All the authors are employees of the US government.
usgovmixed	Some authors are employees of the US government.
cagov	All the authors are employees of the Canadian government.
cagovmixed	Some authors are employees of the Canadian government.
licensedusgovmixed	Some authors are employees of the US government, and the publication rights are licensed to ACM.
licensedcagov	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
licensedcagovmixed	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
othergov	Authors are employees of a government other than the US or Canada.
licensedothergov	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
iw3c2w3	Special statement for conferences organized by IW3C2.
iw3c2w3g	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.
cc	Creative Commons license. If this key is set, *doclicense* images are used to typeset the license. See also \setcctype command.
acmcopyright	The authors transfer the copyright to the ACM. This choice is no longer available for the non-commissioned authors and will trigger a warning.

ing icon. A modern TEX distribution includes these icons in the package *doclicense*. In case your distribution does not have them, ACM provides a file `ccicons.zip` with these icons. Just unzip it in the same directory where your document is.

The ACM submission software should generate the right command for you to paste into your file.

`\copyrightyear` Each copyright statement must have the year of copyright. By default it is the same as `\acmYear`, but you can override this using the macro `\copyrightyear`, e.g.,

```
\acmYear{2016}
\copyrightyear{2015}
```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option `authorversion=true` produces a special form of the copyright statement for this case. Note that you still need the `\setcopyright` command and (optionally) `\copyrightyear` command to tell TEX about the copyright owner and year. Also, you should be aware that due to the different sizes of the permssion blocks for the printed version and authors' version, the page breaks might be different between them.

`abstract` (*env.*) The environment `abstract` must *precede* the `\maketitle` command. Again, this is different from the standard LATEX. Putting `abstract` after `\maketitle` will trigger an error.

`teaserfigure` (*env.*) A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment `teaserfigure` is used for these figures. This environment must be used *before* `\maketitle`, for example,

```
\begin{teaserfigure}
  \includegraphics[width=\textwidth]{sampleteaser}
  \caption{This is a teaser}
  \label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command `\settopmatter{`⟨*settings*⟩`}`. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter `authorsperrow` requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting `authorsperrow` to 0 will revert it to the default settings.

Table 4: Settings for the `\settopmatter` command

Parameter	Values	Meaning
`printccs`	true/false	Whether to print CCS categories
`printacmref`	true/false	Whether to print the ACM bibliographic entry
`printfolios`	true/false	Whether to print page numbers (folios)
`authorsperrow`	numeric	Number of authors per row for the title page in conference proceedings formats

The parameter `printacmref` specifies whether to print the ACM bibliographic entry (default), or not. Note that this entry is required for all articles over one page in length, and is optional for one-page articles (abstracts).

`\received` The command `\received[`⟨*stage*⟩`]{`⟨*date*⟩`}` sets the history of the publication. The `[`⟨*stage*⟩`]` argument is optional; the default is `Received` for the first date and `revised` for the subsequent ones. For example,

```
\received{20 February 2007}
\received[revised]{12 March 2009}
\received[accepted]{5 June 2009}
```

`\maketitle` The macro `\maketitle` must be the last command in the top-matter group. That is it must follow the commands defined in this section.

`\shortauthors` *After* the command `\maketitle`, the macro `\shortauthors` stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Top matter of ACM Engage materials

ACM Engage materials resemble conference proceedings, but have some special features. First, as a rule, they are released under a Creative Commons license. By default CC-BY is used. However, if you want to use another variant of CC license, use `\setcctype` command, for example, `\setcctype{by-nc}`. Second, abstract is called *synopsis*. Third, there are special top matter items used for the materials, such as *Course, Resource Type, Programming Language, CS Topics*.

`\setengagemetadata` These items are set with the command `\setengagemetadata{`⟨*name*⟩`}{`⟨*value*⟩`}`, for example,

```
\setengagemetadata{Course}{CS1}
\setengagemetadata{Programming Language}{Python}
\setengagemetadata{Knowledge Unit}{Programming Concepts}
\setengagemetadata{CS Topics}{Functions, Data Types, Expressions,
Mathematical Reasoning}
```

Note that the type of Creative Commons license, if such license is used, is automatically added to the metadata.

2.5 ACM cover page

ACM cover pages are forms of extended abstracts that are added to journals at the late stage. Authors prepare them as separate `.tex` files using `acmcp` format. At present only JDS uses them, but in the future this may change.

There are several top matter commands specific for this format.

`\acmArticleType` There are five article types accepted by JDS: *Research* (the default), *Review*, *Discussion*, *Invited*, and *Position*. The command `\acmArticleType{`⟨*type*⟩`}` sets the article type, for example

```
\acmArticleType{Review}
```

`\acmCodeLink` `\acmDataLink` The commands `\acmCodeDataLink{`⟨*link*⟩`}` and `\acmDataLink{`⟨*link*⟩`}` set the links to the data and code accompanying the paper, for example,

```
\acmCodeLink{https://github.com/repository/code}
\acmDataLink{https://datadryad.org/stash/dataset/doi:DOI}
```

You may repeat these commands if you have several repositories.

`\acmContributions` The command `\acmContributions{`⟨*contributions*⟩`}` sets the contributions of the authors, for example,

```
\acmContributions{AW designed the study, CD performed it, all
authors contributed to the writing.}
```

ACM cover page should have the following obligatory sections:

- Problem statement,
- Methods,
- Results,
- Significance.

Sometimes the addresses extracted from the authors' data are too long to fit on the page. In this case the command `\authorsaddresses` can be use to override them, for example,

```
\authorsaddresses{Corresponding author: Ben Trovato,
\href{mailto:trovato@corporation.com}{trovato@corporation.com};
Institute for Clarity in Documentation, P.O. Box 1212, Dublin,
Ohio, USA, 43017-6221}
```

The design of the cover page may require additional runs of latex to make the elements of the page align.

2.6 Internationalization

ACM accepts publications in languages other than English, as well as papers in English with translations of titles, subtitles, keywords and abstracts into other languages. Papers in languages other than English usually have titles, subtitles (if applicable), keywords and abstracts in English. Note that CCS concepts are always typeset in English.

To submit these papers you need to set the option `language` in the `\documentclass` command. This option can be repeated, for example,

```
\documentclass[sigconf, language=french, language=english]{acmart}
```

The last language in the list is the main language of the paper, i.e. the one for the main title, abstract, body, etc. The other languages are *secondary,* and used for translated titles, keywords, abstracts. Thus the paper above is written in English, and has a secondary abstract and a secondary title in French. On the other hand, a paper in French with secondary titles and abstracts in English and German should use, for example

```
\documentclass[sigconf,
               language=german,
               language=english,
               language=french]{acmart}
```

This key can use any language defined in *babel* package [3] (currently the package is tested with English, French, German and Spanish languages; other languages may require a translation of `\keywordsname` macro). Actually *acmart* loads *babel* internally, so you can use the facilities provided by this package.

If this key is set, you have access to several additional top matter commands.

`\translatedtitle` `\translatedsubtitle` `\translatedkeywords`

The commands `\translatedtitle{`⟨*language*⟩`}`title, `\translatedsubtitle{`⟨*language*⟩`}`subtitle and `\translatedkeywords`language`keywords` are used to set title, subtitle and keywords in the secondary language. For example, a paper in English with French title and abstract may set

```
\title{A note on computational complexity}
\translatedtitle{french}{Remarque sur la complexit\'e de calcul}
```

while a paper in French should set

```
\title{Remarque sur la complexit\'e de calcul}
\translatedtitle{english}{A note on computational complexity}
```

`translatedabstract` (*env.*)

Similarly, `translatedabstract` environment has a mandatory language argument, for example,

```
\begin{translatedastract}{english}
  This is the English version of the abstract
\end{translatedastract}
```

You can repeat these commands if a paper has more than one secondary language.

Use the standard commands (`\title`, `\subtitle`, `\keywords`, `abstract`) for the main language of the paper.

2.7 Algorithms

There are now several good packages for typesetting algorithms [4, 5, 6], and the authors are free to choose their favorite one.

2.8 Figures and tables

The new ACM styles use the standard LaTeX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.

2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

   figure, table: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

   figure*, table* in two-column formats, a special figure or table taking a full text width.

   teaserfigure: a special figure before `\maketitle`.

3. Accordingly, when scaling images, one should use the following sizes:

   (a) For `teaserfigure`, `figure` in one-column mode or `figure*` in two-column mode, use `\textwidth`. In one-column mode, you can also use `\columnwidth`, which coincides with `\textwidth` in this case.

   (b) For `figure` in two-column mode, use `\columnwidth`.

It is strongly recommended to use the package `booktabs` [7] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.

2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a `\minipage` environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
  \toprule
  TERRAIN\footnote{This is a table footnote. This is a
    table footnote. This is a table footnote.} &
    (200\,m$\times$200\,m) Square\\
  Node Number     & 289\\
  Node Placement  & Uniform\\
  Application     & Many-to-Many/Gossip CBR Streams\\
  Payload Size    & 32 bytes\\
```

```
  Routing Layer   & GF\\
  MAC Layer       & CSMA/MMSN\\
  Radio Layer     & RADIO-ACCNOISE\\
  Radio Bandwidth & 250Kbps\\
  Radio Range     & 20m--45m\\
  \bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table
 sourcenote. This is a table sourcenote. This is a table
 sourcenote.

 \emph{Note:} This is a table footnote.
\end{minipage}
\end{table}
```

Tables and figures are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.9 Descriptions of images

`\Description` Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[`⟨*short description*⟩`]{`⟨*long description*⟩`}` should be placed inside every `figure`, `teaserfigure` or `marginfigure` environment to provide a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```
\begin{figure}
  \centering
  \includegraphics{voltage}
  \Description{A bell-like histogram centered at $0.5$~V with most
  measurements between $0.2$~V and $0.8$~V}
  \caption{Histogram of the measurements of voltage}
  \label{fig:voltage}
\end{figure}
```

At present the lack of descriptions generates a warning at compilation.

2.10 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for `theorem`, `conjecture`, `proposition`, `lemma` and `corollary`, and

acmdefinition: this is the style used for `example` and `definition`.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

Sometimes authors want to define new theorem-like constructs that use `theorem` counters. These constructs must be defined either after `\begin{document}`, or delayed using `\AtEndPreamble` macro, for example,

```
\AtEndPreamble{%
  \theoremstyle{acmdefinition}
  \newtheorem{remark}[theorem]{Remark}}
```

If you use *cleveref* and share counters between the theorem-like constructs, you need to explicitly tell *cleveref* the kind of the construct you use, for example,

```
\newtheorem{theorem}{Theorem}[section]
\newtheorem{lemma}[theorem]{Lemma}
 % Theorems and lemmas share counters
...
\begin{theorem}\label{thm:test} % This is a theorem
  ...
\begin{lemma}\label[lemma]{test-lemma} % This is a lemma
```

2.11 Online-only and offline-only material

`printonly` (*env.*)
`screenonly` (*env.*)

Some supplementary material in ACM publications is put online but not in the printed version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to `true`. Conversely, the text inside the environment `printonly` is typeset only when this option is set to `false`. For example,

```
\section{Supplementary materials}

\begin{printonly}
  Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
  (The actual supplementary materials.)
\end{screenonly}
```

We use the `comment` package for typesetting this code, so `\begin` and `\end` should start on a line of their own with no leading or trailing spaces.

2.12 Note about anonymous mode

`anonsuppress` (*env.*)

When the option `anonymous` is selected, TEX suppresses author information (including the number of authors) for an anonymous review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
  This is the continuation of the previous work by the author
  \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the printonly and screenonly environments, \begin{anonsuppress} and \end{anonsuppress} should start on a line of their own with no leading or trailing spaces.

\anon To suppress short snippets of information, use the command \anon[⟨*substitute*⟩]{⟨*suppressed-text*⟩}. By default [⟨*substitute*⟩] is the word ANONYMOUS. Examples:

```
This work was performed at \anon{NSA}.
This work was performed at \anon[No Such Agency]{NSA}.
```

2.13 Acknowledgments

The traditional "Acknowledgments" section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

acks (*env.*) The environment acks starts an unnumbered section "Acknowledgments" unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the printonly and screenonly environments, \begin{acks} and \end{acks} should start on a line of their own with no leading or trailing spaces or comments.

\grantsponsor \grantnum All financial support *must* be listed using the commands \grantsponsor and \grantnum. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

\grantsponsor{⟨*sponsorID*⟩}{⟨*name*⟩}{⟨*url*⟩}
\grantnum[⟨*url*⟩]{⟨*sponsorID*⟩}{⟨*number*⟩}.

Here {⟨*sponsorID*⟩} is the unique ID used to match grants to sponsors, {⟨*name*⟩} is the name of the sponsor, {⟨*url*⟩} is its URL, and {⟨*number*⟩} is the grant number. The {⟨*sponsorID*⟩} of the \grantnum command must correspond to the {⟨*sponsorID*⟩} of a \grantsponsor command. Some awards have their own web pages, which you can include using the optional argument of the \grantnum command.

At present {⟨*sponsorID*⟩} is chosen by the authors and can be an arbitrary key in the same way the label of a \cite is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
  The authors would like to thank Dr. Yuhua Li for providing the
  matlab code of the \textit{BEPS} method.

  The authors would also like to thank the anonymous referees for
  their valuable comments and helpful suggestions. This work is
  supported by the \grantsponsor{my-grant-GS501100001809}{National Natural
  Science Foundation of
  China}{https://doi.org/10.13039/501100001809} under Grant
  No.:~\grantnum{GS501100001809}{61273304}
  and~\grantnum[http://www.nnsf.cn/youngscientists]{GS501100001809}{Young
  Scientists' Support Program}.
\end{acks}
```

2.14 Bibliography

The ACM lets you use either BibTEX or BibLATEX to process your references: they require slightly different setup of your LATEX file, as detailed in the following subsections.

2.14.1 Processing using BibTEX

This uses the `natbib` package for formatting references and the BibTEX style file `ACM-Reference-Format.bst` for BibTEX processing. You can disable loading of `natbib` using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of BibTEX styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citestyle` If you use `natbib`, you can select one of two predefined citation styles using the command `\citestyle`: the author-year format `acmauthoryear` or the numeric format `acmnumeric`. For example,

```
\citestyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

`\setcitestyle` You can further customize `natbib` using the `\setcitestyle` command, for example,

```
\setcitestyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitestyle{nosort}
```

It is useful if you do not like the way `natbib` sorts citation lists.

If you use `natbib`, then commands like `\citep` and `\citeauthor` are automatically supported. The command `\shortcite` is the same as `\cite` in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command `\citeyear` put the year in parentheses. In version 1.48 and later it produces just the year; the command `\citeyearpar` can be used to emulate its old behavior.

There are several customized BIBTEX entry types and fields in the ACM style file `ACM-Reference-Format.bst` that you may want to be aware of. You can find many examples on the Web page https://www.acm.org/publications/authors/bibtex-formatting.

2.14.2 URL, DOI, eprint

The style supports the fields `doi` and `url`, for example,

```
doi =          "10.1145/1188913.1188915",
url =          "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

Normally the printing of URL is suppressed if DOI is present. However, there is a special field `distinctURL`. If it is present and is not zero, URL is printed even if DOI is present.

The dynamic nature of Internet makes URLs not permanent: sometimes they disappear or change. The problem of "stale links" exists from the early days of WWW. That

is why ACM prefers DOIs to URLs: unlike the latter, the former are supposed to work forever. However, if you really need to use URLs, there are two facilities that help to mitigate some problems with the URLs. The field `lastaccessed` gives the date when the given URL was visited and had the information you saw. Presumably, some service like Internet Wayback Machine (https://web.archive.org/) allows the reader to retrieve this link at the given date. Moreover, sometimes a page is explicitly archived by this or other service. In this case the field `archived` will give the reference ot the archival version. Examples:

```
lastaccessed = {March 2, 2005},
archived = {https://web.archive.org/web/20240505055615}
```

The style supports the arXiv-recommended fields `eprint` and (optionally) `primaryclass`, for example,

```
 eprint =       "960935712",
 primaryclass = "cs",
```

2.14.3 Special entry types

There are several special entry types. Types `online` and `game` are used for Web pages and games, for example,

```
@online{Thornburg01,
 author =       "Harry Thornburg",
 year =         "2001",
 title =        "Introduction to Bayesian Statistics",
 url =          "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
 month =        mar,
 lastaccessed = "March 2, 2005",
}
```

Entry types `artifactsoftware`, `artifactdataset` (with synonyms `software` and `dataset`) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
   title = {R: A Language and Environment for Statistical Computing},
   author = {{R Core Team}},
   organization = {R Foundation for Statistical Computing},
   address = {Vienna, Austria},
   year = {2019},
   url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
 author    =  {Sam Anzaroot and Andrew McCallum},
 title     =  {{UMass} Citation Field Extraction Dataset},
 year      = 2013,
 url       =
    {http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
 lastaccessed = {May 27, 2019}
}
```

For these entry types you can use the lastaccessed field to add the access date for the URL and archived field to add the archival link.

There are two ways to enter video or audio sources in the bibliograpy corresponding to two different possibilies. For standalone sources available online, you can use an online entry and set its howpublished field. For example,

```
@online{Obama08,
 author =       "Barack Obama",
 year   =       "2008",
 title  =       "A more perfect union",
 howpublished = "Video",
 day    =       "5",
 url    =       "http://video.google.com/videoplay?docid=6528042696351994555",
 month  =       mar,
 lastaccessed = "March 21, 2008",
}
```

For sources available as supplemental material attached to conference proceedings and similar documents, you can use the usual inproceedings entry type and set its howpublished field:

```
@Inproceedings{Novak03,
 author =       "Dave Novak",
 title =        "Solder man",
 booktitle =    "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
 year =         "2003",
 publisher =    "ACM Press",
 address =      "New York, NY",
 pages =        "4",
 month =        "March 21, 2008",
 doi =          "10.9999/woot07-S422",
 howpublished = "Video",
}
```

Sometimes you need to cite a complete issue of a journal. The periodical entry type is intended for this:

```
@periodical{JCohen96,
 key =          "Cohen",
 editor =       "Jacques Cohen",
 title =        "Special issue: Digital Libraries",
 journal =      "Communications of the {ACM}",
 volume =       "39",
 number =       "11",
 month =        nov,
 year =         "1996",
}
```

Sometimes a work is presented at meeting, but is not (yet) published in the proceedings. The entry type presentation is used for this purpose. The field venue is used for the place of the meeting:

```
@Presentation{Reiser2014,
```

```
  author = {Brian J. Reiser},
  year = 2014,
  title = {Designing coherent storylines aligned with NGSS for the
           K-12 classroom},
  venue = {National Science Education Leadership Association
        Meeting, Boston, MA, USA},
  url = {https://www.academia.edu/6884962/}
 }
```

The URL, if present, may be accompanied by `lastaccessed` and `archived` links.

A preprint can be cited using the entry `preprint`, for example,

```
@preprint{AnzarootPBM14,
  author    = {Sam Anzaroot and
               Alexandre Passos and
               David Belanger and
               Andrew McCallum},
  title     = {Learning Soft Linear Constraints with Application to
                   Citation Field Extraction},
  year      = {2014},
  archivePrefix = {arXiv},
  eprint    = {1403.1349},
  doi =    {10.48550/arXiv.1403.1349}
}
```

Sometimes you need to cite an article under review. ACM prefers the authors to use preprints for this purpose, but sometimes it is not feasible. In this case you can use the entry `underreview`, for example,

```
@underreview{Baggett2025,
  author = {R. Baggett and M. Simecek and C. Chambellan
            and K. Tsui and M. Fraune},
  year = 2025,
  title = {Fluidity in the Phased Framework of Technology
           Acceptance: Case Study to Gain a Holistic Understanding
           of (Older Adult) Participant Advancement Through
           Acceptance Phases with  Mobile Telepresence Robots},
  journal = {Robotics Aut. Systems}
}
```

2.14.4 Dates and sorting

If you do not know the year of publication, the style will add "[n. d.]" (for "no date") to the entry.

If you do not know the author (this is often the case for online entries), use the `key` field to add a key for sorting and citations, for example,

```
@online{TUGInstmem,
 key =          {TUG},
 year  =        2017,
 title =        "Institutional members of the {\TeX} Users Group",
 url =          "http://wwtug.org/instmem.html",
```

```
 lastaccessed = "May 27, 2017",
}
```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with "von" or "van" part: should Ludwig van Beethoven be sorted under "V" or under "B"? The American practice is to use "van" in sorting, i.e. to file van Beethoven under "V". However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old "noopsort" trick by Oren Patashnik. Add to the `.bib` file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
 author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as "Beethoven" rather than "van Beethoven".

The current bst style defines a number of macros for common journal names. In particular, all journals listed in Table 5 are includes, so you can use strings like `journal = taccess` for *ACM Transactions on Accessible Computing*.

2.14.5 Processing using BibLaTeX

You will find in this package two sets of style files for BibLaTeX, `acmnumeric` and `acmauthoryear`, that mimic the behavior of the ACM-Reference-Format.bst BibTeX style. They provide you access to all the power of BibLaTeX and already include support for advanced citation of software artifacts from the `biblatex-software` package, also separately available on CTAN. Look at the `biblatex-software` documentation to learn more about what it offers.

There are a few key differences in how the LaTeX sources are set up when using BibLaTeX instead of BibTeX, that we summarize briefly here (please refer to the official BibLaTeX documentation for more details).

First of all, you need to pass the `natbib=false` option to the document class, and remove the `\citestyle{acmauthoryear}` command from the sources (if present).

Then, in the preamble of your document you need to load the BibLaTeX package and select the approriate bibliography style, as follows

```
\RequirePackage[
 datamodel=acmdatamodel,
 style=acmnumeric, % use style=acmauthoryear for publications that require it
 ]{biblatex}
```

Also in the preamble, you need to declare the bibliography sources files using the `\addbibresource` command (one `\addbibresource` command per source file), e.g.:

```
\addbibresource{software.bib}
\addbibresource{sample-base.bib}
```

At the end of the document, where you want the bibliography to appear, you need to place the command `\printbibliography`.

Look at the `sample-*-biblatex.tex` files that can be found in the samples directory after running `make` for templates showcasing these BibLaTeX styles.

2.15 Colors

While printed ACM publications are usually black and white, `screen` mode allows the use of colors. The ACM classes pre-define several colors according to [8]: `ACMBlue`, `ACMYellow`, `ACMOrange`, `ACMRed`, `ACMLightBlue`, `ACMGreen`, `ACMPurple` and `ACMDarkBlue`. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.

2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).

3. Most printing is in black and white.

4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: http://colorbrewer2.org/

2. ACE: The Accessible Colour Evaluator: http://daprlab.com/ace/ for designing WCAG 2.0 compliant palettes.

2.15.1 Manual bibliography

Some people create bibliographies manually, writing down `\bibitem` commands explicitly. This approach is *not* recommended for ACM styles. The reason is, ACM submissions, besides being typeset, are also processed by special programs that extract metadata and references. Bibliographies created automatically with ACM styles contain customized macros for these programs, for example,

```
\bibitem[Ablamowicz and Fauser(2007)]%
        {Ablamowicz07}
\bibfield{author}{\bibinfo{person}{Rafal Ablamowicz} {and}
  \bibinfo{person}{Bertfried Fauser}.} \bibinfo{year}{2007}\natexlab{}.
\newblock \bibinfo{booktitle}{\emph{CLIFFORD: a Maple 11 Package for Clifford
  Algebra Computations, version 11}}.
\newblock
```

```
\urldef\tempurl%
\url{http://math.tntech.edu/rafal/cliff11/index.html}
\showURL{%
Retrieved February 28, 2008 from \tempurl}
```

Manual bibliographies without these macros may slow down the publication process, and thus are not recommended for ACM submissions.

2.16 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [9] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomencl` [10] and `glossaries` [11] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokenpenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [12], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.17 Counting words

Some ACM conferences use word count limits for papers. The calculation of word number for a paper with math, tables and figures is not a trivial task. Currently the authoritative word count is done by translating the PDF to text and using `wc -w` on the output. Authors can use the package `texcount` (used by Overleaf) to get an estimate of the word count. To faciliate this one adds to the beginning of the package metacomments

```
%TC:macro \cite [option:text,text]
%TC:macro \citep [option:text,text]
%TC:macro \citet [option:text,text]
%TC:envir table 0 1
%TC:envir table* 0 1
%TC:envir tabular [ignore] word
%TC:envir displaymath 0 word
%TC:envir math 0 word
%TC:envir comment 0 0
```

and uses \begin{math}...\end{math} instead of dollar signs for math. Note that the count is in any case approximate, and the final decision of editors is based on PDF count.

The script texcount provides a report of word count in the document.

2.18 Disabled or forbidden commands

The goal of acmart package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in acmart.

You may *not* put several authors or several e-mails into a \author or \email command. This may lead to errors or warning.

You cannot change \baselinestretch in your document: this produces an error.

You should not abuse the command \vspace: this command may disturb the typesetting of ACM papers.

You should not load amssymb package since the package acmart defines the corresponding symbols itself.

2.19 Notes for wizards

Sometimes you need to change the behavior of acmart. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* acmart is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the titletoc package with acmart. This package should be loaded before hyperref. However, since acmart loads hyperref itself, the line \usepackage{titletoc} in the preamble will lead to grief (see http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style).

Another example is passing options to a package. Suppose you want to use the dvipsnames option of the xcolor package. Normally you cannot do this because acmart loads this package itself without options.

The file acmart-preload-hook.tex can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][]{\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then titletoc will be loaded before hyperref. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass dvipsnames to xcolor.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support.* If you decide to use this hook, you are on your own.

\AtBeginMaketitle Another hook is \AtBeginMaketitle. The commands in this hook are executed before \maketitle.

2.20 Currently supported publications

Table 5: ACM publications and arguments of the `\acmJournal` command

Abbreviation	Publication

TWEB	ACM Transactions on the Web

Besides the publications listed in Table 5, there is a special "publication" type FACMP, a forthcoming ACM publication, reserved for new journals which are not assigned an ISSN yet.

2.21 Samples

There are several samples of acmart documents, that can serve as templates for the authors. Among them `sample-sig...` are templates for conference papers, while

`sample-acm...` are templates for journal articles and special materials.

Here is the list of the samples:

sample-manuscript: A proceedings paper in the manuscript format.

sample-acmsmall: A journal paper in the `acmsmall` format.

sample-acmsmall-biblatex: A journal paper using experimental *biblatex* bibliography processing.

sample-acmlarge: A journal paper in the `acmlarge` format.

sample-acmtog: A journal paper in the `acmtog` format.

sample-sigconf: A proceedings paper in the standard `sigconf` format.

sample-sigconf-biblatex: A proceedings paper in the `sigconf` format using experimental *biblatex* bibliography processing.

sample-sigconf-authordraft: A proceedings paper in the `sigconf` format with the `authordraft` option selected.

sample-sigconf-i13n: A proceedings paper in the `sigconf` format with multilanguage titles and abstract.

sample-sigconf-xelatex: A proceedings paper in the `sigconf` format, XeLaTeX version.

sample-sigconf-lualatex: A proceedings paper in the `sigconf` format, LuaLaTeX version.

sample-sigplan: A proceedings paper in the `sigplan` format.

sample-acmsmall-conf: A proceedings paper in the `acmsmall` format for the publication in a journal using this option.

sample-acmtog-conf: A proceedings paper in the `acmtog` format for the publication in a journal using this option.

sample-acmcp: A sample of ACM Cover Page used by JDS.

sample-acmengage: A sample of ACM Engage publication.

2.22 A note about `sigchi-a` format

Starting in Spring 2020 ACM retired SIGCHI Extended Abstract format (`sigchi-a`). ACM will not, under any circumstances, accept documents in this format for publication and will not offer technical support to the authors who use this template.

You may use this format in the `nonacm` mode only, as in

```
\documentclass[sigchi-a, nonacm]{acmart}
```

`sidebar` (*env.*)
`marginfigure` (*env.*)
`margintable` (*env.*)

This format has large margin uses for special figures and tables. This package provides three environments for this with optional captions:

sidebar: textual information in the margin,

marginfigure: a figure in the margin,

margintable: a table in the margin.

The environments `figure` and `table` produce figures and tables with the width of the text column. The environments `figure*` and `table*` produce "wide" figures and tables, which take a large part of the margin.

The horizontal sizes of figures are:

1. `figure`: `\columnwidth`,
2. `marginfigure`: `\marginparwidth`,
3. `figure*`: `\fulltextwidth`.

2.23 Experiments with tagging

ACM is firmly committed to produce fully tagged PDFs compliant with the accessibility standards. We use the developmental version of tagging code by LaTeX3 team, see the details at https://www.latex-project.org/publications/indexbytopic/pdf/ and https://tug.org/twg/accessibility/overview.html.

At present this work is highly experimental. You may try the experiments by (1) using the class `acmart-tagged` in the document class line, and (2) adding the command `\DocumentMetadata[`⟨*options*⟩`]` in the preamble, see the file `sample-acmsmall-tagged.tex`. If you do this, please *do not ask ACM for support.* On the other hand, bug reports at https://github.com/borisveytsman/acmart/issues will be appreciated.

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most `.dtx` files put driver code in a separate `.drv` driver file. We roll this code into the main file and use the pseudo-guard `<gobble>` for it.

```
⟨class⟩\NeedsTeXFormat{LaTeX2e}
⟨*gobble⟩
\ProvidesFile{acmart.dtx}
⟨/gobble⟩
⟨class&!tagged⟩\ProvidesClass{acmart}
⟨tagged⟩\ProvidesClass{acmart-tagged}
[2025/08/27 v2.16 Typesetting articles for the Association for Computing Machinery]
```

And the driver code:

```
⟨*gobble⟩
\documentclass{ltxdoc}
\usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
\usepackage[tt=false, type1=true]{libertine}
\usepackage[varqu]{zi4}
\usepackage[libertine]{newtxmath}
\usepackage[tableposition=top]{caption}
\usepackage{hypdoc}
\PageIndex
\CodelineIndex
\RecordChanges
\EnableCrossrefs
\begin{document}
  \DocInput{acmart.dtx}
\end{document}
⟨/gobble⟩
⟨*class⟩
⟨!tagged⟩\def\@classname{acmart}
⟨tagged⟩\def\@classname{acmart-tagged}
```

3.2 Preload hook

We preload `acmart-preload-hook`:

```
\InputIfFileExists{acmart-preload-hook.tex}{%
  \ClassWarning{\@classname}{%
    I am loading acmart-preload-hook.tex. You are fully responsible
    for any problems from now on.}}{}
```

3.3 Options

We need `xkeyval` since some of our options may have values:

```
\RequirePackage{xkeyval}
```

We use `xstring` to check whether user input is valid

```
\RequirePackage{xstring}
```

We need `iftex` to check the engine

```
\RequirePackage{iftex}
```

`format` The possible formats

```
\define@choicekey*+{\@classname.cls}{format}[\ACM@format\ACM@format@nr]{%
  manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
  sigplan, sigchi, sigchi-a, acmengage, acmcp}[manuscript]{}{%
  \ClassError{\@classname}{The option format must be manuscript,
    acmsmall, acmlarge, acmtog, sigconf, siggraph,
    sigplan, sigchi or sigchi-a}}
\def\@DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{\@classname.cls}{format=#1}}}
\@DeclareACMFormat{manuscript}
\@DeclareACMFormat{acmsmall}
\@DeclareACMFormat{acmlarge}
\@DeclareACMFormat{acmtog}
\@DeclareACMFormat{sigconf}
\@DeclareACMFormat{siggraph}
\@DeclareACMFormat{sigplan}
\@DeclareACMFormat{sigchi}
\@DeclareACMFormat{sigchi-a}
\@DeclareACMFormat{acmengage}
\@DeclareACMFormat{acmcp}
\ExecuteOptionsX{format}
```

`\if@ACM@screen` Whether we use screen mode

```
\define@boolkey+{\@classname.cls}[@ACM@]{screen}[true]{%
  \if@ACM@screen
    \PackageInfo{\@classname}{Using screen mode}%
  \else
    \PackageInfo{\@classname}{Not using screen mode}%
  \fi}{\PackageError{\@classname}{The option screen can be either true or
    false}}
\ExecuteOptionsX{screen=false}
```

`\if@ACM@urlbreakonhyphens`

```
\define@boolkey+{\@classname.cls}[@ACM@]{urlbreakonhyphens}[true]{%
  \if@ACM@urlbreakonhyphens
    \PackageInfo{\@classname}{Using breaking urls on hyphens}%
  \else
    \PackageInfo{\@classname}{Not breaking urls on hyphens}%
 \fi}{\PackageError{\@classname}{The option urlbreakonhyphens can be either true or
    false}}
\ExecuteOptionsX{urlbreakonhyphens=true}
```

`\if@ACM@acmthm` Whether we define theorem-like environments.

```
\define@boolkey+{\@classname.cls}[@ACM@]{acmthm}[true]{%
  \if@ACM@acmthm
    \PackageInfo{\@classname}{Requiring acmthm}%
  \else
    \PackageInfo{\@classname}{Suppressing acmthm}%
  \fi}{\PackageError{\@classname}{The option acmthm can be either true or
    false}}
\ExecuteOptionsX{acmthm=true}
```

`\if@ACM@review` Whether we use review mode

```
\define@boolkey+{\@classname.cls}[@ACM@]{review}[true]{%
```

```
  \if@ACM@review
    \PackageInfo{\@classname}{Using review mode}%
    \AtBeginDocument{\@ACM@printfoliostrue}%
  \else
    \PackageInfo{\@classname}{Not using review mode}%
  \fi}{\PackageError{\@classname}{The option review can be either true or
    false}}
\ExecuteOptionsX{review=false}
```

`\if@ACM@authorversion` Whether we use author's-version mode

```
\define@boolkey+{\@classname.cls}[@ACM@]{authorversion}[true]{%
  \if@ACM@authorversion
    \PackageInfo{\@classname}{Using authorversion mode}%
  \else
    \PackageInfo{\@classname}{Not using authorversion mode}%
 \fi}{\PackageError{\@classname}{The option authorversion can be either true or
    false}}
\ExecuteOptionsX{authorversion=false}
```

`\if@ACM@nonacm` Special option for non-ACM publications using the ACM typesetting options.

```
\define@boolkey+{\@classname.cls}[@ACM@]{nonacm}[true]{%
  \if@ACM@nonacm
    \PackageInfo{\@classname}{Using nonacm mode}%
    \AtBeginDocument{\@ACM@printacmreffalse}%
    % in 'nonacm' mode we disable the "ACM Reference Format"
    % printing by default, but this can be re-enabled by the
    % user using \settopmatter{printacmref=true}
  \else
    \PackageInfo{\@classname}{Not using nonacm mode}%
  \fi}{\PackageError{\@classname}{The option nonacm can be either true or
    false}}
\ExecuteOptionsX{nonacm=false}
```

`\if@ACM@balance` Whether to balance the last page

```
\define@boolkey+{\@classname.cls}[@ACM@]{balance}[true]{}{%
  \PackageError{\@classname}{The option balance can be either true or
    false}}
\ExecuteOptionsX{balance}
```

`\if@ACM@pbalance` Whether to balance the last page

```
\define@boolkey+{\@classname.cls}[@ACM@]{pbalance}[true]{}{%
  \PackageError{\@classname}{The option pbalance can be either true or
    false}}
\ExecuteOptionsX{pbalance=false}
```

`\if@ACM@natbib@override` This macro is no longer used.

`\if@ACM@natbib` Whether we use `natbib` mode

```
\define@boolkey+{\@classname.cls}[@ACM@]{natbib}[true]{%
  \if@ACM@natbib
    \PackageInfo{\@classname}{Explicitly selecting natbib mode}%
  \else
    \PackageInfo{\@classname}{Explicitly deselecting natbib mode}%
  \fi}{\PackageError{\@classname}{The option natbib can be either true or
```

```
    false}}
\ExecuteOptionsX{natbib=true}
```

`\if@ACM@anonymous` Whether we use anonymous mode

```
\define@boolkey+{\@classname.cls}[@ACM@]{anonymous}[true]{%
  \if@ACM@anonymous

```

3.4 Setting switches

\if@ACM@manuscript Whether we use manuscript mode

```
\newif\if@ACM@manuscript
```

\if@ACM@journal There are two kinds of publications: journals and books

```
\newif\if@ACM@journal
```

\if@ACM@journal@bibstrip Sometimes ACM wants a journal-like publication to have conference information in the bibstrip and vice versa, so we have an additional switch.

```
\newif\if@ACM@journal@bibstrip
```

\if@ACM@journal@bibstrip@or@tog ACM TOG sometimes uses journal-like bibstrip even for conference proceedings, so we need to set it separately

```
\newif\if@ACM@journal@bibstrip@or@tog
```

\if@ACM@sigchiamode The formatting of SIGCHI extended abstracts is quite unusual. We have a special switch for them.

```
\newif\if@ACM@sigchiamode
```

\if@ACM@engage ACM Engage course materials have special formatting

```
\newif\if@ACM@engage
\@ACM@engagefalse
```

\if@ACM@acmcp ACM cover page formatting

```
\newif\if@ACM@acmcp
\@ACM@acmcpfalse
```

Setting up switches

```
\ifnum\ACM@format@nr=5\relax % siggraph
\ClassWarning{\@classname}{%
  The format siggraph is now obsolete.\MessageBreak
  I am switching to sigconf.}
  \setkeys{\@classname.cls}{format=sigconf}
\fi
\ifnum\ACM@format@nr=7\relax % sigchi
\ClassWarning{\@classname}{%
  The format sigchi is now obsolete.\MessageBreak
  I am switching to sigconf.}
  \setkeys{\@classname.cls}{format=sigconf}
\fi
\ifnum\ACM@format@nr=8\relax % sigchi
\ClassWarning{\@classname}{%
  ACM SIGCHI has retired the SIGCHI-A template\MessageBreak
  effective immediately. ACM is keeping this template\MessageBreak
  option available to authors who are working on legacy\MessageBreak
  documents only. ACM will not, under any circumstances,\MessageBreak
  accept documents in this format for publication and\MessageBreak
  will not offer technical support to the authors who use\MessageBreak
  this template.\MessageBreak
  ACM SIGCHI is directing Conference leaders and\MessageBreak
  authors to publish their articles using the SIGCONF\MessageBreak
  template call.}
```

```
\fi
\ifnum\ACM@format@nr=0\relax
  \@ACM@manuscripttrue
\else
  \@ACM@manuscriptfalse
\fi
\@ACM@sigchiamodefalse
\ifcase\ACM@format@nr

  \@ACM@journal@bibstriptrue
  \@ACM@journal@bibstrip@or@togtrue
\else
 \@ACM@journal@bibstripfalse
\fi
```

3.5 Loading the base class and package

¡*tagged¿ Before we load the base class we want to save the original definitions of sectioning commands since acmart redefines them, and we need the vanilla versions.

\@startsection@kernel

```
\let\@startsection@kernel\@startsection
```

\@xsect@kernel

```
\let\@xsect@kernel\@xsect
```

\@sect@kernel

```
\let\@sect@kernel\@sect
```

\@ssect@kernel

```
\let\@ssect@kernel\@ssect
```

¡/tagged¿

At this point we either have \ACM@fontsize or use defaults

```
\ifx\ACM@fontsize\@empty
  \ifcase\ACM@format@nr
  \relax % manuscript
    \def\ACM@fontsize{9pt}%
  \or % acmsmall
    \def\ACM@fontsize{10pt}%
  \or % acmlarge
    \def\ACM@fontsize{10pt}%
  \or % acmtog
    \def\ACM@fontsize{9pt}%
  \or % sigconf
    \def\ACM@fontsize{9pt}%
  \or % siggraph
    \def\ACM@fontsize{9pt}%
   \or % sigplan
    \def\ACM@fontsize{10pt}%
   \or % sigchi
    \def\ACM@fontsize{9pt}%
  \or % sigchi-a
    \def\ACM@fontsize{10pt}%
  \or % acmengage
    \def\ACM@fontsize{10pt}%
  \or % acmcp
    \def\ACM@fontsize{9pt}%
  \fi
\fi
\ClassInfo{\@classname}{Using fontsize \ACM@fontsize}
\LoadClass[\ACM@fontsize, reqno]{amsart}
\RequirePackage{microtype}
```

We need etoolbox for delayed code

```
\RequirePackage{etoolbox}

`\bibliographystyle` The `amsart` package redefines `\bibliographystyle` since it prefers the AMS bibliography style. We turn it back to the LaTeX definition:

```
\def\bibliographystyle#1{%
  \ifx\@begindocumenthook\@undefined\else
    \expandafter\AtBeginDocument
  \fi
    {\if@filesw
       \immediate\write\@auxout{\string\bibstyle{#1}}%
     \fi}}
```

3.10 Other packages

Graphics and color.

```
\RequirePackage{graphicx}
\RequirePackage[prologue]{xcolor}
```

We define ACM colors according to [8]:

```
\definecolor[named]{ACMBlue}{cmyk}{1,0.1,0,0.1}
\definecolor[named]{ACMYellow}{cmyk}{0,0.16,1,0}
\definecolor[named]{ACMOrange}{cmyk}{0,0.42,1,0.01}
\definecolor[named]{ACMRed}{cmyk}{0,0.90,0.86,0}
\definecolor[named]{ACMLightBlue}{cmyk}{0.49,0.01,0,0}
\definecolor[named]{ACMGreen}{cmyk}{0.20,0,1,0.19}
\definecolor[named]{ACMPurple}{cmyk}{0.55,1,0,0.15}
\definecolor[named]{ACMDarkBlue}{cmyk}{1,0.58,0,0.21}
```

Author-draft mode or sigchi-a mode

```
\if@ACM@authordraft
  \RequirePackage{draftwatermark}
  \SetWatermarkFontSize{0.5in}
  \SetWatermarkColor[gray]{.9}
  \SetWatermarkText{\parbox{12em}{\centering
      Unpublished working draft.\\
      Not for distribution.}}
\else
  \if@ACM@sigchiamode
    \if@ACM@nonacm\else
      \RequirePackage{draftwatermark}
      \SetWatermarkFontSize{0.5in}
      \SetWatermarkColor[gray]{.9}
      \SetWatermarkText{\parbox{12em}{\centering
          Legacy document. \\
          Not for publication in an ACM venue}}
    \fi
  \fi
\fi
```

3.11 Paper size and paragraphing

We use geometry for dimensions. Note that the present margins do not depend on the font size option—we might need to change this. See https://github.com/borisveytsman/acmart/issues/5#issuecomment-272881329.

```

\fi
```

`\normalparindent` The `amsart` package defines the `\normalparindent` length and initializes it to 12pt (the value of `\parindent` in `amsart`). It is later used to set the `\listparindent` length in the `quotation` environment and the `\parindent` length in the `\@footnotetext` command. We set `\normalparindent` to the value of `\parindent` as selected by `acmart` for consistent paragraph indents.

```
\setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: frontmatter footnotes, "regular" footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a `\@float`. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use `manyfoot` for layered footnotes instead.

`\copyrightpermissionfootnoterule` This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.

```
\def\copyrightpermissionfootnoterule{\kern-3\p@
  \hrule \@width \columnwidth \kern 2.6\p@}

\RequirePackage{manyfoot}
\SelectFootnoteRule[2]{copyrightpermission}
\DeclareNewFootnote{authorsaddresses}
\SelectFootnoteRule[2]{copyrightpermission}
\DeclareNewFootnote{copyrightpermission}
```

`\footnoterule` Tschichold's rules:

```
\def\footnoterule{\kern-3\p@
  \hrule \@width 4pc \kern 2.6\p@}
```

`\endminipage` We do not use footnote rules in minipages

```
\def\endminipage{%
    \par
    \unskip
    \ifvoid\@mpfootins\else
      \vskip\skip\@mpfootins
      \normalcolor
      \unvbox\@mpfootins
    \fi
```

```
    \@minipagefalse
  \color@endgroup
  \egroup
  \expandafter\@iiiparbox\@mpargs{\unvbox\@tempboxa}}
```

`\@textbottom` Add some stretch according to David Carlisle's advice at http://tex.stackexchange.com/a/62318/5522

```
\def\@textbottom{\vskip \z@ \@plus 1pt}
\let\@texttop\relax
```

In two-column layouts, force both columns to be the same height by inserting extra internal vertical space to fill out the page.

```
\ifcase\ACM@format@nr
\relax % manuscript

\or % siggraph
  \flushbottom
\or % sigplan
  \flushbottom
\or % sigchi
  \flushbottom
\or % sigchi-a
\or % acmengage
  \flushbottom
\or % acmcp
  \flushbottom
\fi
```

3.12 Fonts

Somehow PDFTeX and XeTeX require different incantations to make a PDF compliant with the current Acrobat bugs. Xpdf is much better.

The code below is by Ross Moore.

```
\ifPDFTeX
\input{glyphtounicode}
\pdfglyphtounicode{f_f}{FB00}
\pdfglyphtounicode{f_f_i}{FB03}
\pdfglyphtounicode{f_f_l}{FB04}
\pdfglyphtounicode{f_i}{FB01}
\pdfglyphtounicode{t_t}{0074 0074}
\pdfglyphtounicode{f_t}{0066 0074}
\pdfglyphtounicode{T_h}{0054 0068}
\pdfgentounicode=1
\RequirePackage{cmap}
\fi
```

`\if@ACM@newfonts` Whether we load the new fonts

```
\newif\if@ACM@newfonts
```

```
\@ACM@newfontstrue
\IfFileExists{libertine.sty}{}{\ClassWarning{\@classname}{You do not
    have the libertine package installed.  Please upgrade your
    TeX}\@ACM@newfontsfalse}

    \captionsetup[table]{labelfont={bf, small},
      textfont={bf, small}}
  \or % acmengage
  \or % acmcp
  \fi
\fi
```

sidebar The sidebar environment:

```
\newfloat{sidebar}{}{sbar}
\floatname{sidebar}{Sidebar}
```

```
\renewenvironment{sidebar}{\Collect@Body\@sidebar}{}
```

`\@sidebar` The processing of the saved text

```
\long\def\@sidebar#1{\bgroup\let\@vspace\@vspace@orig
  \let\@vspacer\@vspacer@orig\captionsetup{type=sidebar}%
  \marginpar{\small#1}\egroup}
```

`marginfigure` The `marginfigure` environment:

```
\newenvironment{marginfigure}{\Collect@Body\@marginfigure}{}
```

`\@marginfigure` The processing of the saved text

```
\long\def\@marginfigure#1{\bgroup
  \let\@vspace\@vspace@orig
  \let\@vspacer\@vspacer@orig
  \captionsetup{type=figure}%
  \marginpar{\@Description@presentfalse\centering
    \small#1\if@Description@present\else
      \global\@undescribed@imagestrue
      \ClassWarning{\@classname}{A possible image without description}
      \fi}%
  \egroup}
```

`margintable` The `margintable` environment:

```
\newenvironment{margintable}{\Collect@Body\@margintable}{}
```

`\@margintable` The processing of the saved text

```
\long\def\@margintable#1{\bgroup\let\@vspace\@vspace@orig
  \let\@vspacer\@vspacer@orig\captionsetup{type=table}%
  \marginpar{\centering\small#1}\egroup}
```

SIGCHI extended abstracts provide an interesting possibility to push into the margin. Here we use `figure*` and `table*` for this.

`\fulltextwidth` We define the width of the boxes as

```
\newdimen\fulltextwidth
\fulltextwidth=\dimexpr(\textwidth+\marginparwidth+\marginparsep)
```

`\@dblfloat` We redefine the double-float command. First, we make the size bigger. Second, our default position is going to be `tp` (to give marginalia a chance)

```
\if@ACM@sigchiamode
\def\@dblfloat{\bgroup\let\@vspace\@vspace@orig
  \let\@vspacer\@vspacer@orig\columnwidth=\fulltextwidth
  \let\@endfloatbox\@endwidefloatbox
  \def\@fpsadddefault{\def\@fps{tp}}%
  \@float}
\fi
```

`\end@dblfloat` And the end. Just adding a `\bgroup`.

```
\if@ACM@sigchiamode
\def\end@dblfloat{%
    \end@float\egroup}
\fi
```

\@endwidefloatbox This is the end of a wide box—we basically move everything to the left

```
\def\@endwidefloatbox{%
  \par\vskip\z@skip
  \@minipagefalse
  \outer@nobreak
  \egroup
  \color@endbox
  \global\setbox\@currbox=\vbox{\moveleft
    \dimexpr(\fulltextwidth-\textwidth)\box\@currbox}%
  \wd\@currbox=\textwidth
}
```

3.15 Lists

```
\ifcase\ACM@format@nr
\relax % manuscript
\or % acmsmall
\or % acmlarge
\or % acmtog
\or % sigconf
\or % siggraph
\or % sigplan
\def\labelenumi{\theenumi.}
\def\labelenumii{\theenumii.}
\def\labelenumiii{\theenumiii.}
\def\labelenumiv{\theenumiv.}
\or % sigchi
\or % sigchi-a
\or % acmengage
\or % acmcp
\fi
```

The AMS uses generous margins for lists. Note that amsart defines \leftmargin values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that amsart redefines the enumerate and itemize environments with a \makelabel command that uses \llap, so the \labelwidth value is (effectively) irrelevant; nonetheless, we follow amsart and set \labelwidth to \leftmargin minus \labelsep.

```
\newdimen\@ACM@labelwidth
\AtBeginDocument{%
  \setlength\labelsep{4pt}
  \setlength{\@ACM@labelwidth}{6.5pt}

  %% First-level list: when beginning after the first line of an
  %% indented paragraph or ending before an indented paragraph, labels
  %% should not hang to the left of the preceding/following text.
  \setlength\leftmargini{\z@}
  \addtolength\leftmargini{\parindent}
  \addtolength\leftmargini{2\labelsep}
  \addtolength\leftmargini{\@ACM@labelwidth}

  %% Second-level and higher lists.
  \setlength\leftmarginii{\z@}
  \addtolength\leftmarginii{0.5\labelsep}
```

```
  \addtolength\leftmarginii{\@ACM@labelwidth}
  \setlength\leftmarginiii{\leftmarginii}
  \setlength\leftmarginiv{\leftmarginiii}
  \setlength\leftmarginv{\leftmarginiv}
  \setlength\leftmarginvi{\leftmarginv}
  \@listi}
\newskip\listisep
\listisep\smallskipamount
\def\@listI{\leftmargin\leftmargini
  \labelwidth\leftmargini \advance\labelwidth-\labelsep
  \listparindent\z@
  \topsep\listisep}
\let\@listi\@listI
\def\@listii{\leftmargin\leftmarginii
  \labelwidth\leftmarginii \advance\labelwidth-\labelsep
  \topsep\z@skip}
\def\@listiii{\leftmargin\leftmarginiii
  \labelwidth\leftmarginiii \advance\labelwidth-\labelsep}
\def\@listiv{\leftmargin\leftmarginiv
  \labelwidth\leftmarginiv \advance\labelwidth-\labelsep}
\def\@listv{\leftmargin\leftmarginv
  \labelwidth\leftmarginv \advance\labelwidth-\labelsep}
\def\@listvi{\leftmargin\leftmarginvi
  \labelwidth\leftmarginvi \advance\labelwidth-\labelsep}
```

\descriptionlabel We do not use a colon by default like amsart does:

```
\renewcommand{\descriptionlabel}[1]{\upshape\bfseries #1}
```

\description Make the description environment indentation consistent with that of the itemize and enumerate environments.

```
\renewenvironment{description}{\list{}{%
    \labelwidth\@ACM@labelwidth
    \let\makelabel\descriptionlabel}%
}{
  \endlist
}
\let\enddescription=\endlist % for efficiency
```

3.16 Top-matter data

\if@ACM@maketitle@typeset The switch to check whether \maketitle is already typeset. It is initally false, and setting top matter when it is true is wrong.

```
\newif\if@ACM@maketitle@typeset
\@ACM@maketitle@typesetfalse
```

```

`\num@authorgroups` The total number of “groups”. Each group is several authors with the same affiliations(s)

```
\newcount\num@authorgroups
\num@authorgroups=0\relax
```

`\num@authors` The total number of authors

```
\newcount\num@authors
\num@authors=0\relax
```

`\if@insideauthorgroup` Whether we are continuing an author group

```
\newif\if@insideauthorgroup
\@insideauthorgroupfalse
```

\author Adding an author to the list of authors and addresses.

Note that we want to typeset the link to the author's orcid if known. The problem is, we know the orcid only after the author is entered. The trick is based on the idea that `\csname...\endcsname` is `\relax` unless defined. Therefore we typeset authors by the special macro `\csname typeset@author\the\num@authors\endcsname`, which is defined by `\orcid` command.

```

```

`\copyrightyear` By default, the copyright year is the same as `\acmYear`, but one can override this:

```
\def\copyrightyear#1{\def\@copyrightyear{#1}}
\copyrightyear{\@acmYear}
```

`\@teaserfigures` The teaser figures container

```
\def\@teaserfigures{}
```

`teaserfigure` The teaser figure

```
\newenvironment{teaserfigure}{\Collect@Body\@saveteaser}{}
```

`\@saveteaser` Saving the teaser

```
\long\def\@saveteaser#1{\g@addto@macro\@teaserfigures{\@teaser{#1}}}
```

`\thanks` We redefine amsart `\thanks` so the anonymous key works

```
\renewcommand{\thanks}[1]{%
  \@ifnotempty{#1}{%
    \if@ACM@anonymous
      \g@addto@macro\thankses{\thanks{A note}}%
   \else
    \g@addto@macro\thankses{\thanks{#1}}%
   \fi}}
```

\anon We provide \anon command, which obscures parts of the text if the package option anonymous is set

```
\newcommand{\anon}[2][ANONYMIZED]{%
  \if@ACM@anonymous%
    {\color{ACMOrange}#1}%
  \else%
    #2%
  \fi}
```

3.19 Maketitle hook

The current LaTeX provides a nice lthooks mechanism. However, since it is relatively new, we will use oldfashioned approach—at least for now.

\@beginmaketitlehook The hook

```
\ifx\@beginmaketitlehook\@undefined
  \let\@beginmaketitlehook\@empty
\fi
```

\AtBeginMaketitle Adding to the hook

```
\def\AtBeginMaketitle{\g@addto@macro\@beginmaketitlehook}
```

3.20 ACM Engage top matter

\@acmengagemetadata The special metadata for ACM engage course materials

```
\def\@acmengagemetadata{}
```

\setengagemetadata Adding topic to engage metadata

```
\def\setengagemetadata#1#2{%
  \g@addto@macro{\@acmengagemetadata}{%
    \@setengagemetadata{#1}{#2}}}
```

3.21 Typesetting top matter

\mktitle@bx Some of our formats use a two-column design. Some use a one-column design. In all cases we use a wide title. Thus we typeset the top matter in a special box to be used in the construction \@twocolumn[⟨*box*⟩].

```
\newbox\mktitle@bx
```

\maketitle The (in)famous \maketitle. Note that in sigchi-a mode, authors are *not* in the title box.

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```
\def\maketitle{\@beginmaketitlehook

3.23 Sectioning

`\ACM@NRadjust` Ross Moore's macro.

Initially `\ACM@sect@format@` just passes through its #1 argument unchanged. When a sectioning macro such as `\section` occurs, the `\ACM@NRadjust` redefines `\ACM@sect@format@` to expand into the styling commands; e.g., `\@secfont`. Then `\Sectionformat` is temporarily redefined to produce `\realSectionformat{\ACM@sect@format{#1}}{#2}`, which ultimately becomes `\Sectionformat{\@secfont{#1}}{#2}`. This is done to allow `\Sectionformat` to be variable, as may be needed in particular circumstances. Its current expansion is saved as `\realSectionformat` which is used with the modified 1st argument, then `\Sectionformat` is reverted to its former expansion.

To style the section-number, the line `#1{}` is used at the end of `\ACM@NRadjust`. This imposes style-changing commands for fonts and sizes, but any `\MakeUppercase` acts on just the `{}`. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in `\@adddotafter` being called too soon, so a slight adjustment is made, via `\ACM@adddotafter`, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched `\@adddotafter`.

```
\def\ACM@NRadjust#1{%

Amasat does not define tocindents for paragraphs and subparagraphs. Here we add them

```
\AtBeginDocument{%
```

```
  \@for\@tempa:=-1,0,1,2,3,4,5\do{%
    \@ifundefined{r@tocindent\@tempa}{%
      \@xp\gdef\csname r@tocindent\@tempa\endcsname{0pt}}{}%
  }%
}
\def\@writetocindents{%
  \begingroup
  \@for\@tempa:=-1,0,1,2,3,4,5\do{%
    \immediate\write\@auxout{%
      \string\newlabel{tocindent\@tempa}{%
        \csname r@tocindent\@tempa\endcsname}}%
  }%
  \endgroup}
```

`\@adddotafter` Add punctuation after a sectioning command

```
\def\@adddotafter#1{#1\@addpunct{.}}
```

`\@addspaceafter` Add space after a sectioning command

```
\def\@addspaceafter#1{#1\@addpunct{\enspace}}
```

```
\if@ACM@acmcp
   \setcounter{secnumdepth}{-1}%
\fi
```

3.24 TOC lists

`\@dotsep` Related to the `\tableofcontents` are all the horizontal fillers. Base LaTeX defines `\@dottedtocline`, which we should not disable. Yet, this command expects `\@dotsep` to be defined but leaves this to the class implementation. Since `amsart` does not provide this, we copy the standard variant from `article` here.

```
\providecommand*\@dotsep{4.5}
```

3.25 Theorems

`\@acmplainbodyfont` The font to typeset the body of the `acmplain` theorem style.

```
\def\@acmplainbodyfont{\itshape}
```

`\@acmplainindent` The amount to indent the `acmplain` theorem style.

```
\def\@acmplainindent{\parindent}
```

`\@acmplainheadfont` The font to typeset the head of the `acmplain` theorem style.

```
\def\@acmplainheadfont{\scshape}
```

`\@acmplainnotefont` The font to typeset the note of the `acmplain` theorem style.

```
\def\@acmplainnotefont{\@empty}
```

Customization of the `acmplain` theorem style:

```
\ifcase\ACM@format@nr
\relax % manuscript
\or % acmsmall
\or % acmlarge
\or % acmtog
```

```
\or % sigconf
\or % siggraph
\or % sigplan
  \def\@acmplainbodyfont{\itshape}
  \def\@acmplainindent{\z@}
  \def\@acmplainheadfont{\bfseries}
  \def\@acmplainnotefont{\normalfont}
\or % sigchi
\or % sigchi-a
\or % acmengage
\or % acmcp
\fi
```

acmplain The acmplain theorem style

```
\newtheoremstyle{acmplain}%
  {.5\baselineskip\@plus.2\baselineskip
    \@minus.2\baselineskip}% space above
  {.5\baselineskip\@plus.2\baselineskip
    \@minus.2\baselineskip}% space below
  {\@acmplainbodyfont}% body font
  {\@acmplainindent}% indent amount
  {\@acmplainheadfont}% head font
  {.}% punctuation after head
  {.5em}% spacing after head
  {\thmname{#1}\thmnumber{ #2}\thmnote{ {\@acmplainnotefont(#3)}}}% head spec
```

\@acmdefinitionbodyfont The font to typeset the body of the acmdefinition theorem style.

```
\def\@acmdefinitionbodyfont{\normalfont}
```

\@acmdefinitionindent The amount to indent the acmdefinition theorem style.

```
\def\@acmdefinitionindent{\parindent}
```

\@acmdefinitionheadfont The font to typeset the head of the acmdefinition theorem style.

```
\def\@acmdefinitionheadfont{\itshape}
```

\@acmdefinitionnotefont The font to typeset the note of the acmdefinition theorem style.

```
\def\@acmdefinitionnotefont{\@empty}
```

Customization of the acmdefinition theorem style:

```
\ifcase\ACM@format@nr
\relax % manuscript
\or % acmsmall
\or % acmlarge
\or % acmtog
\or % sigconf
\or % siggraph
\or % sigplan
  \def\@acmdefinitionbodyfont{\normalfont}
  \def\@acmdefinitionindent{\z@}
  \def\@acmdefinitionheadfont{\bfseries}
  \def\@acmdefinitionnotefont{\normalfont}
\or % sigchi
\or % sigchi-a
```

```
\or % acmengage
\or % acmcp
\fi
```

acmdefinition The acmdefinition theorem style

```
\newtheoremstyle{acmdefinition}%
  {.5\baselineskip\@plus.2\baselineskip
    \@minus.2\baselineskip}% space above
  {.5\baselineskip\@plus.2\baselineskip
    \@minus.2\baselineskip}% space below
  {\@acmdefinitionbodyfont}% body font
  {\@acmdefinitionindent}% indent amount
  {\@acmdefinitionheadfont}% head font
  {.}% punctuation after head
  {.5em}% spacing after head
  {\thmname{#1}\thmnumber{ #2}\thmnote{ {\@acmdefinitionnotefont(#3)}}}% head spec
```

Make acmplain the default theorem style.

```
\theoremstyle{acmplain}
```

Delay defining the theorem environments until after other packages have been loaded. In particular, the cleveref package must be loaded before the theorem environments are defined in order to show the correct environment name (see https://github.com/borisveytsman/acmart/issues/138). The acmthm option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```
\AtEndPreamble{%
  \if@ACM@acmthm
  \theoremstyle{acmplain}
  \@ifundefined{theorem}{%
  \newtheorem{theorem}{Theorem}[section]
  }{}
  \@ifundefined{conjecture}{%
  \newtheorem{conjecture}[theorem]{Conjecture}
  }{}

  \newtheorem{proposition}[theorem]{Proposition}
  }{}
  \@ifundefined{lemma}{%
  \newtheorem{lemma}[theorem]{Lemma}
  }{}
  \@ifundefined{corollary}{%
  \newtheorem{corollary}[theorem]{Corollary}
  }{}
  \theoremstyle{acmdefinition}
  \@ifundefined{example}{%
  \newtheorem{example}[theorem]{Example}
  }{}
  \@ifundefined{definition}{%
  \newtheorem{definition}[theorem]{Definition}
  }{}
  \fi
```

```
  \theoremstyle{acmplain}
}
```

`\@proofnamefont` The font to typeset the proof name.

```
\def\@proofnamefont{\scshape}
```

`\@proofindent` Whether or not to indent proofs.

```
\def\@proofindent{\indent}
```

Customization of the proof environment.

```
\ifcase\ACM@format@nr
\relax % manuscript
\or % acmsmall
\or % acmlarge
\or % acmtog
\or % sigconf
\or % siggraph
\or % sigplan
  \def\@proofnamefont{\itshape}
  \def\@proofindent{\noindent}
\or % sigchi
\or % sigchi-a
\or % acmengage
\or % acmcp
\fi
```

`proof` We want some customization of the proof environment.

```
\renewenvironment{proof}[1][\proofname]{\par
  \pushQED{\qed}%
  \normalfont \topsep6\p@\@plus6\p@\relax
  \trivlist
  \item[\@proofindent\hskip\labelsep
        {\@proofnamefont #1\@addpunct{.}}]\ignorespaces
}{%
  \popQED\endtrivlist\@endpefalse
}
```

3.26 Balancing columns

We need balancing only if the user did not disable it, and we use a two column format. Note that `pbalance` uses a different mechanism.

```
\AtEndPreamble{%
  \if@ACM@pbalance
    \global\@ACM@balancefalse
    \ifcase\ACM@format@nr
    \relax % manuscript
       \or % acmsmall
       \or % acmlarge
       \or % acmtog
          \RequirePackage{pbalance}%
       \or % sigconf
          \RequirePackage{pbalance}%
       \or % siggraph
```

```
      \RequirePackage{pbalance}%
    \or % sigplan
      \RequirePackage{pbalance}%
    \or % sigchi
      \RequirePackage{pbalance}%
    \or % sigchi-a
    \or % acmengage
      \RequirePackage{pbalance}%
    \or % acmcp
  \fi
\fi
\if@ACM@balance
  \ifcase\ACM@format@nr
  \relax % manuscript
       \global\@ACM@balancefalse
    \or % acmsmall
      \global\@ACM@balancefalse
    \or % acmlarge
      \global\@ACM@balancefalse
    \or % acmtog
      \RequirePackage{balance}%
    \or % sigconf
      \RequirePackage{balance}%
    \or % siggraph
      \RequirePackage{balance}%
    \or % sigplan
      \RequirePackage{balance}%
    \or % sigchi
      \RequirePackage{balance}%
    \or % sigchi-a
      \global\@ACM@balancefalse
    \or % acmengage
      \RequirePackage{balance}%
    \or % acmcp
      \global\@ACM@balancefalse
  \fi
\fi
}
\AtEndDocument{%
  \if@ACM@balance
  \if@twocolumn
  \balance
  \fi\fi}
```

3.27 Acknowledgments

\acksname

```
\newcommand\acksname{Acknowledgments}
```

\acks This is a comment-like structure

```
\specialcomment{acks}{%
  \begingroup
  \section*{\acksname}
  \phantomsection\addcontentsline{toc}{section}{\acksname}
```

```
}{%
  \endgroup
}
```

\grantsponsor We just typeset the name of the sponsor

```
\def\grantsponsor#1#2#3{#2}
```

\grantnum

```
\newcommand\grantnum[3][]{#3%
  \def\@tempa{#1}\ifx\@tempa\@empty\else\space(\url{#1})\fi}
```

3.28 Conditional typesetting

We use the `comment` package for conditional typesetting:

```
\AtEndPreamble{%
\if@ACM@screen
  \includecomment{screenonly}
  \excludecomment{printonly}
\else
  \excludecomment{screenonly}
  \includecomment{printonly}
\fi
\if@ACM@anonymous
  \excludecomment{anonsuppress}
  \excludecomment{acks}
\else
  \includecomment{anonsuppress}
\fi}
```

3.29 Additional bibliography commands

\showeprint The command `\showeprint` has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word 'arxiv'.

```
\newcommand\showeprint[2][arxiv]{%
  \def\@tempa{#1}%
  \ifx\@tempa\@empty\def\@tempa{arxiv}\fi
  \def\@tempb{arxiv}%
  \ifx\@tempa\@tempb\relax
     arXiv:\href{https://arxiv.org/abs/#2}{#2}%
  \else
     \def\@tempb{arXiv}%
     \ifx\@tempa\@tempb\relax
       arXiv:\href{https://arxiv.org/abs/#2}{#2}%
     \else
       #1:#2%
    \fi
  \fi}
```

3.30 Index

\theindex Standard `amsart` uses plain page style in index pages. This clashes with line numbering for `review` option, so we redefine it.

```
\def\theindex{\@restonecoltrue\if@twocolumn\@restonecolfalse\fi
  \columnseprule\z@ \columnsep 35\p@
  \@indextitlestyle
  \let\item\@idxitem
  \parindent\z@  \parskip\z@\@plus.3\p@\relax
  \raggedright
  \hyphenpenalty\@M
  \footnotesize}
```

3.31 End of Class

\vspace We do not disable \vspace, but add warning to it

```
\let\@vspace@orig=\@vspace
\let\@vspacer@orig=\@vspacer
\apptocmd{\@vspace}{\ClassWarning{\@classname}{\string\vspace\space should
    only be used to provide space above/below surrounding
    objects}}{}{}
\apptocmd{\@vspacer}{\ClassWarning{\@classname}{\string\vspace\space should
    only be used to provide space above/below surrounding
    objects}}{}{}
\let\@vspace@acm=\@vspace
\let\@vspacer@acm=\@vspacer
```

Change History

1.48
General: Added prologue option to xcolor 52
Bib code cleanup (Zack Weinberg) 37
Documentation update (siggraph) . 37
1.49
General: New journal: DTRAP 37
1.53
General: New journals: PACMCGIT, TIOT, TDSCI 37
Rearranged docs 37
1.54
General: Moved footnote stuff before hyperref call (Ross Moore) 37
1.56
General: Documented \Description 37
1.57
General: Booktabs package is now the default 37
1.58
General: Changes in samples (Enrico Gregorio) 37
New journal: HEALTH. TDS is renamed to TDSCI 37
1.60
General: New option: urlbreakonhyphens 37
\if@ACM@urlbreakonhyphens: introduced macro 38
1.62
General: New journal: TELO 37
1.63
General: New journal: FACMP 37
New journal: TQUANT 37
1.63a
General: Move: TQUANT to TQC . . 37
1.64
General: Putting abstract after \maketitle now causes an error . 37
1.65
General: New journal: DGOV 37
1.66
General: ACM reference format is now mandatory for papers over one page; CCS concepts and keywords are now mandatory for papers over two pages 37
Authors' addresses are mandatory for journal articles 37
\@mkauthorsaddresses: Added warning for missing addresses . 102
\ccsdesc@parse: Added warning for missing concepts 81
\if@ACM@printacmref: Added warning for longer papers 78
\keywords: Added warning for missing keywords 78
1.69
\vspace: Added the changed command to avoid grouping . . . 119
1.70
General: Name change for TDS 62
1.71
General: Bibliography change: volume for @inproceedings is now in brackets together with series . . . 37
LuaTeX now uses the OTF versions of fonts 37
Retired sigchi and sigchi-a 37
1.75
General: Documentation update . . . 37
1.78
General: Documentation update: Word count 37
1.79
General: Updated indormation for TAP, TCPS, TEAC 62
1.80
General: Added DLT and FAC 62
1.82
General: Updated abbreviations and codes for several journals 62
1.84
General: New journals: JDS, GAMES 37, 62
1.85
General: Added CC licenses 37
Added: acmengage 51
New journal: JRC 62
\@mkauthors: Added: acmengage . . 96
\@mktitle: Added: acmengage 93
\@printtopmatter: Added: acmengage 92
\@specialsection: Added: acmengage 91
\@subtitlefont: Added: acmengage 94
\@titlefont: Added: acmengage . . 93
\ACM@linecountR: Added: acmengage 105
format: New format: acmengage . . . 38
\parskip: Added: acmengage 54

1.87
General: New journals: ACMJCSS, JATS, TORS 62
format: New format: acmcp 38
1.88
General: Added ISSN for ACMJCSS . 62
Added ISSN for GAMES 62
Added PACMNET 62
1.89
General: Added PACMMOD 62
Added TOPML 62
\@printtopmatter: Moved badges to top header 92
1.90
General: Added TOPML eISSN 62
1.90a
General: Changes in the sample keywords and concepts 37
1.92
General: Documentation update: use of 'anonymous' throughout 37
Moved hyperxmp again due to kernel update 51
2.04
General: Deleted loading ifdraft due to the new release of hyperxmp . . . 51
Explicitly load ifdraft since hyperxmp tries to load it inside a group 51
2.05
General: New data for TELO 62
2.06
General: Added eISSN for a number of journals 62
2.07
General: Another change for TELO . 62
2.13
\orcid: Protected orchidcite against uppercasing 74
2.15
General: Added AILET, TAIS, TAISAP, ACMJDS 62

v1.00
General: First released version 37
v1.01
General: Changed hyperref colors in screen mode (closes https://github.com/borisveytsman/acmart/issues/1) 37
Defined ACM colors 37
Explicitly put draft option (closes https://github.com/borisveytsman/acmart/issues/4) 40
Set headheight to 1pc for all formats (closes https://github.com/borisveytsman/acmart/issues/5) 37
v1.02
General: Added TOPS and TSC (closes https://github.com/borisveytsman/acmart/issues/12) 37
Documentation changes (closes https://github.com/borisveytsman/acmart/issues/13) 37
v1.03
General: Added anonsuppress environment 37
Added authorversion option (closes https://github.com/borisveytsman/acmart/issues/9) 37
\@formatdoi: Added macro 83
\if@ACM@authorversion: Added macro 39
\maketitle: Added special case of authorversion 87
v1.04
General: Updated bibliography for siggraph 37
\acmArticleSeq: Name change by Matthew Fluet 76
\acmDOI: Name change by Matthew Fluet 76
\acmISBN: Name change by Matthew Fluet 76
v1.05
General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib 37
Patched \setcitestyle command; closes https://github.com/borisveytsman/acmart/issues/19 37
v1.06
\@ACM@badge@skip: Added macro . . 77
\@ACM@badge@width: Added macro . 76
\@ACM@title@width: Added macro . 77
\@mktitle@i: Added processing badges 94
Made generic 94
\@mktitle@ii: Now this macro is obsolete 94

\@mktitle@iii: Added processing badges . . . 94
Made more generic . . . 94
\@mktitle@iv: Made more generic . 95
\@printtopmatter: Added processing badges . . . 92
\@subtitlefont: Added macro . . . 94
\@titlefont: Added macro . . . 93
\acmBadgeL: Added macro . . . 77
\acmBadgeR: Added macro . . . 77
\if@ACM@badge: Added macro . . . 76
v1.07
\maketitle: Corrected a bug with abstract footnotes . . . 87
Corrected a bug with permssion and footnotes order . . . 87
v1.08
General: SIGPLAN reformatting by Matthew Fluet . . . 37
Typos corrected (Tobias Pape) . . . 37
v1.09
General: Revert SIGPLAN caption rules . . . 37
v1.10
General: Changes of 'licensedothergov' wording . . . 82
\maketitle: Corrected a bug with doi in manuscript and author vertsion, https://github.com/borisveytsman/acmart/issues/36 . . . 87
standardpagestyle: Reversed folios location . . . 106
v1.11
General: Customization of ACM theorem styles and proof environment by Matthew Fluet . . 37
v1.12
General: Added graceful behavior when libertine fonts are absent . . 56
Documentation updates . . . 37
\@marginfigure: Now centering by default . . . 60
\@margintable: Now centering by default . . . 60
\@mkauthors@i: Removed MakeTextUppercase due to a bug with new kernel . . . 98
\@parfont: Moved to \section@raggedright . . . 112
\copyrightpermissionfootnoterule: Added macro . . . 55
\descriptionlabel: Redefined . . . 62
\footnoterule: Made shorter . . . 55
\if@ACM@natbib@override: Added macro . . . 39
\if@ACM@newfonts: Added macro . . 56
\maketitle: Moved thankses to copyrightpermission box . . . 87
\section@raggedright: Introduced macro . . . 112
v1.13
General: Font adjustments for acmsmall . . . 96
Increased font size for ACM Large 42
Print bibliographic information by default for the proceedings . . . 79
\@mpfootnotetext: Made minipage footnotes centered . . . 51
\bibliographystyle: Redefined macro . . . 52
\bibstyle@acmauthoryear: Added macro . . . 45
\bibstyle@acmnumeric: Added macro . . . 46
\if@ACM@printfolios: Added macro 78
standardpagestyle: Added headers for sigs . . . 106
Expanded headers for sigchi-a . . . 106
Suppressed folios if sig . . . 106
v1.14
General: \citestyle updates (Matthew Fluet) . . . 37
Patched \citestyle . . . 44
\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use . . . 45
\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use . . 46
v1.15
\@ACM@addtoaddress: Added macro 95
\@mkauthors@iii: New authors system . . . 99
\@shortauthors: Introduced macro . 106
\@typeset@author@bx: Moved to separate macro . . . 99
\acks: Added macro . . . 117
\affiliation: Added code for author groups . . . 74
\author: Added code for author groups . . . 73
\city: Added macro . . . 95
\country: Added macro . . . 95
\department: Added macro . . . 95
\grantnum: Added macro . . . 118
\grantsponsor: Added macro . . . 118
\if@insideauthorgroup: Introduced macro . . . 72

\institution: Added macro 95
\num@authorgroups: Renamed 72
\orcid: Introduced macro 74
\position: Added macro 95
\postcode: Added macro 95
\state: Added macro 95
\streetaddress: Added macro 95
standardpagestyle: Better handling of anonymous mode 106
v1.16
General: Formatting header/footer (Matthew Fluet) 37
\@headfootfont: Added macro 106
standardpagestyle: Customize header/footer text font 106
v1.17
General: Slightly decreased margins for sigs 53
\@makefnmark: Redefined 51
\@mkauthors: TOG now uses the same authors block as other journals . . 96
\@mkauthors@ii: Deleted 99
\@mkbibcitation: Added \nobreak 103
Changed format for sigs 103
\acmArticle: The default is now numerical 76
\acmMonth: The default must be numerical. Closes #50. 76
\acmNumber: The default is now numerical 76
\acmVolume: The default is now numerical 76
\acmYear: The default is now numerical 76
\description: Decreased indent . . . 62
\grantnum: Added url 118
\grantsponsor: Renamed 118
\if@ACM@printacmref: Renamed from \if@ACM@printbib 78
standardpagestyle: Added paper title to sigs 106
v1.18
General: Natbib is now the default for all formats 37
\@mkauthors@i: Now we andify affiliations 98
\@typeset@author@line: Added macro 97
v1.19
General: Include 'Abstract', 'Acknowledgements', and 'References' in PDF bookmarks (Matthew Fluet) 37
Include 'References' in PDF bookmarks (Matthew Fluet) 44
\@mkabstract: Include 'Abstract' in PDF bookmarks (Matthew Fluet) 102
\acks: Include 'Acknowledgements' in PDF bookmarks (Matthew Fluet) 117
v1.20
General: Bug fixes for bst 37
\@mkabstract: Deleted spurious space 102
v1.21
\showeprint: Added macro 118
v1.22
General: More bibliography changes for Aptara 37
v1.23
General: Add PACMPL journal option 37
v1.24
General: Add IMWUT journal option 62
v1.25
General: Updated PACMPL 62
v1.26
General: Corrected \shortcite bug . 37
Documentation typos fixed (thanks to Stephen Spencer) 37
v1.27
\if@ACM@printccs: Typo corrected . 78
v1.28
General: Corrected option natbib behavior 46
Got rid of warnings in pdf keywords 51
\ccsdesc@parse: Change from \to to \textrightarrow (Matteo Riondato) 81
v1.29
General: Increased head to 13pt 53
\@mkabstract: Removed spurious indentation (John Wickerson) . . 102
\ccsdesc@parse: Add spacing after bullet and around rightarrow; semicolon separators no longer in bold/italic (John Wickerson) 81
standardpagestyle: Corrected printfolios (Matthew Fluet) 106
v1.30
General: Added \frenchspacing . . . 120
Bibtex style now recognizes https:// in doi 37
Switched to T1: looks like libertine has problems with \l in OT1 . . . 57
Updated IMWUT and PACMPL . . 62
\department: Added optional parameter 95

v1.31
General: Documentation changes . . . 37
\@additionalaffiliation: Added macro . . . 74
\@mkbibcitation: Disabled linebreak 103
\@startsection: Added \tochangmeasure . . . 48
\@starttoc: Redefined macro . . . 50
\@textbottom: Redefined . . . 56
\acmMonth: The default now is the current month (Matteo Riondato) 76
\acmYear: The default now is the current year (Matteo Riondato) . . 76
\additionalaffiliation: Added macro . . . 74
\l@subsection: Redefined macro . . 50
\l@subsubsection: Redefined macro 50
v1.32
General: Added POMACS journal option . . . 37
Format siggraph is now obsolete . 37
\@formatdoi: New doi format . . . 83
v1.33
General: Added acmart-preload-hook 37
Added cmap and glyphtounicode . 56
BibTeX comma before articleno bug corrected . . . 37
BibTeX crossref bug corrected . . . 37
BibTeX numpages bug corrected . 37
Documentation updates . . . 37
Moved \citename definition for non-natbib bibliography, so a package may redefine it . . . 52
Switched to Type 1 fonts for libertine even if OTF-capable engine is used (Kai Mindermann) . 57
\@ACM@addtoaddress: Added obeypunctuation code . . . 95
\@mkauthors@i: Added obeypunctuation code . . . 98
\@mkauthors@iii: Added obeypunctuation code . . . 99
\@mkauthors@iv: Added obeypunctuation code . . . 100
\@subtitlefont: Added \normalsize . . . 94
\ACM@linecountL: Renamed macro . 104
\ACM@linecountR: Added macro . . . 105
\ACM@timestamp: Added current page number . . . 105
Added macro (Michael D. Adams) . 105
Added submission id . . . 105
\acmSubmissionID: Added macro . . 76
\city: Added obeypunctuation code 95
\country: Added obeypunctuation code . . . 95
\department: Added obeypunctuation code . . . 95
\if@ACM@affiliation@obeypunctuation: Added macro . . . 74
\if@ACM@authordraft: Added macro 40
\if@ACM@natbib@override: Deleted macro . . . 39
\if@ACM@timestamp: Added macro (Michael D. Adams) . . . 40
\institution: Added obeypunctuation code . . . 95
firstpagestyle: Added right linecount for two-column formats 108
Added timestamp (Michael D. Adams) . . . 108
\maketitle: Fixed the bug with figures on top and bottom of the title page, thanks to David Epstein 87
\position: Added obeypunctuation code . . . 95
\postcode: Added obeypunctuation code . . . 95
\state: Added obeypunctuation code 95
\streetaddress: Added obeypunctuation code . . . 95
standardpagestyle: Added right linecount for two-column formats 106
Added timestamp (Michael D. Adams) . . . 106
v1.34
\@mkbibcitation: Deleted DOI from doi numbers . . . 103
\ACM@linecount@bx: Rulers now are continuous . . . 104
\ACM@linecountL: Rulers now are continuous . . . 104
\ACM@linecountR: Rulers now are continuous . . . 105
\maketitle: Added date to the bibstrip in conf proceedings . . . 87
Deleted 'DOI' from doi numbers . 87
Rearranged bibstrip . . . 87
The \terms command is now obsolete . . . 87
\terms: The \terms command now just produces a warning . . . 77
v1.35
General: BibTeX bug fixed: et al. . . . 37
If the copyright is set to usgov or rigtsretained, the price is suppressed . . . 82

\bibstyle@acmauthoryear: Square brackets for author-year style . . . 45
v1.36
General: Added PACMHCI journal options 62
Added the possibility to adjust number of author boxes per row in conference formats 37
\@ACM@authorsperrow: Added macro 79
\@mkauthors@iii: Added authorsperrow overrride 99
\@mkauthors@iv: Added authorsperrow overrride 100
\if@ACM@authordraft: Corrected typo, thanks to bargteil 40
v1.37
General: Reduce list indentation (Matthew Fluet) 61
Set \normalparindent; Reduce list indentation (Matthew Fluet) 37
\description: Reduce list indentation (Matthew Fluet) 62
\descriptionlabel: Reduce list indentation (Matthew Fluet) 62
\normalparindent: Set \normalparindent (Matthew Fluet) 55
v1.38
General: Increase default font size for SIGPLAN 37, 42
v1.39
\@@authornotemark: Added macro . 102
\authornotemark: Added macro . . . 75
v1.40
General: Added 'textcase' package . . 44
Added heightrounded to geometry 53
Added new copyright version: licensedcagov 37
Added package cleveref 37
Added Ross Moore code for glyphtounicode 56
Bibliography changes 37
\@copyrightowner: Added new copyright version: licensedcagov . 83
\@copyrightpermission: Added new copyright version: licensedcagov . 84
\@mkauthors@i: Switched to MakeTextUppercase 98
\@parfont: Switched to MakeTextUppercase 112
\ACM@linecount@bx: Work around a bug in xcolor: looks like cmyk colors in boxes do not work . . . 104
\ccdesc@parse@finish: Added macro 81
\city: We now do not print this even in SIG 95
\country: Fixed bugs with extra spaces 95
\l@subsection: Redefined macro . . 50
\postcode: We now do not print this even in SIG 95
\state: We now do not print this even in SIG 95
\streetaddress: We now do not print this even in SIG 95
v1.41
General: Added new badges 37
v1.42
General: Deleted ACM badges 37
v1.43
\@starttoc: Added \makeatletter 50
\country: Added comma before country for journals 95
v1.44
General: Added package refcount . . . 37
Deleted package cleveref 37
Put theorem defs in a separate style 37
\@acmBooktitle: Added macro 72
\@acmEditors: Added macro 72
\@editorsAbbrev: Added macro . . . 72
\@folioblob: Suppress the blob if acmArticleSeq is empty 108
\@mkbibcitation: If the paper has just one page, use 'page' instead of 'pages' 103
\ACM@restore@pagestyle: Added macro 104
\acmArticle: The default is now empty 76
\acmArticleSeq: Now acmArticle might be empty 76
\acmBooktitle: Added macro 72
\editor: Added macro 72
\if@ACM@acmthm: Added macro 38
\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand) 87
v1.45
\@folioblob: Switched \bfeseries\sffamily to \sffamily\bfseries 108
\@parfont: Switched \bfeseries\sffamily to \sffamily\bfseries 112
\@titlefont: Switched \bfeseries\sffamily to \sffamily\bfseries 93

v1.46
General: Added etoolbox 37
Bst file bug fixes: label width is calculated correctly 37
Delayed hypersetup since journal options may change screen mode 51
PACM now set screen to true 62
Restore theorem defs to class file . 37
\@mkauthorsaddresses: Introduced macro 101
\@mkbibcitation: Added subtitle . . 103
\@printendtopmatter: Made it \par\bigskip uniformly 103
\@printtopmatter: Deleted rule . . . 92
\@setauthorsaddresses: Introduced macro 104
\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm) 104
\author: Started counting authors . . 73
\authorsaddresses: Introduced macro 74
\country: Corrected spacing for institution 95
\if@ACM@acmthm: Modified description 38
\liningnums: Workaround for compatibility with fontspec 57
\maketitle: Added authors' addresses 87
Thankses go before authors' addresses 87
\num@authors: Introduced macro . . 72
v1.47
General: New journal: THRI 37
v1.48
General: \citeyear no longer behaves like \citeyearpar 52
Code prettying (Michael D. Adams) 37
Initial support for Biblatex (Daniel Thomas) 37
Misc entries in the bibliography no longer produce a separate date . . 37
Typos fixed (Jamie Davis) 37
\@headfootfont: Deleted unnecessary switch (Michael D. Adams) 106
\@mkabstract: Removed spurious indentation if abstract is followed by an empty line 102
\ACM@timestamp: Fromatting change (Michael D. Adams) 105
\if@ACM@review: Review mode now switches on folios 38
\maketitle: Added acmart and version info to pdfcreator tag . . . 87
Added language and doctitle attributes to PDF (Andreas Reichinger) 87
Suppressed empty DOI (Serguei Mokhov) 87
v1.50
\@copyrightpermission: New copyright statements for iw3c2w3[g] 84
v1.51
General: Corrected the bug with price suppression 82
Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g 82
XeTeX now uses OTF fonts (Joachim Breitner) 57
firstpagestyle: We now use journal abbreviation for footers 108
standardpagestyle: We now use journal abbreviation for footers . 106
v1.52
\@copyrightowner: Rewording of licenses 83
\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g] 84
v1.53
General: Added PACMCGIT, TIOT, TDSCI 62
v1.54
General: Added Ross's patch for sectioning 111
Deleted indent for subsubsection . 111
XeTeX now uses T1 encoding . . . 57
\@mkbibcitation: Bug corrected (Ross Moore) 103
\@shortauthors: Added submission id in anonymous mode 106
\ACM@adddotafter: Added macro . . 111
\ACM@NR@adjustedSectionformat: Added macro 111
\ACM@NRadjust: Added macro 110
\author: Added submission id in anonymous mode 73
\if@ACM@nonacm: Added macro 39
v1.55
General: Now we use purple color for links 51
Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva) 59
Typo corrected (Zack Weinberg) . 44

\@mkbibcitation: Bug corrected . . . 103
\maketitle: Fixes topnum 87
v1.56
General: Looks like XeTeX requires explicit monotype font declaration 57
Make two-column layouts flush (Philip Quinn) 53
\@marginfigure: Added checking for description 60
\@mkteasers: Added check for description 102
\acksname: Added macro (Philip Quinn) 117
\ccsdesc@parse: End the concepts list with a period (Philip Quinn) . 81
\Description: Added macro 58
\if@Description@present: Added macro 57
\if@undescribed@images: Added macro 58
v1.57
\ACM@origbaselinestretch: Added check whether the user changed \baselinestretch 119
\author: Added warning if \author has comma 73
\email: Added warning if \author has comma 74
\if@ACM@balance: Added macro . . . 39
\vspace: Added warning 119
v1.58
General: Added HEALTH. TDSCI is renamed to TDS 62
Suppressed \addtocounter in pdf subject 51
\@dblfloat: Deleted spurious \vspace warning 60
\@marginfigure: Deleted spurious \vspace warning 60
\@margintable: Deleted spurious \vspace warning 60
\@mkbibcitation: Deleted spurious \vspace warning 103
\@printendtopmatter: Deleted spurious \vspace warning 103
\@sidebar: Deleted spurious \vspace warning 60
\maketitle: Original \vspace inside \maketitle 87
\vspace: Preserved old versions as \@vspace@orig and \@vspace@orig 119
v1.59
\acmConference: Setting \@ACM@journal@bibstrip 71
\acmJournal: Setting \@ACM@journal@bibstrip 71
\if@ACM@journal@bibstrip: Introduced macro 41
firstpagestyle: Added logic for conference papers using journal format 108
Moved page styles to \AtBeginDocument 108
standardpagestyle: Added logic for conference papers using journal format 106
Moved page styles to \AtBeginDocument 106
v1.60
\@headfootfont: Moved to footnotesize 106
v1.61
\@typeset@author@bx: Added \normalbaselines 99
v1.64
\ACM@linecount@bx: Bug fix: made the spacing on the left and the right size equal 104
\if@ACM@maketitle@typeset: Introduced macro 62
\maketitle: Added a switch setting to show that \maketitle is typeset . 87
v1.65
\@mkauthorsaddresses: Deleted cs@addpunct 101
v1.66
General: Patching algorithm and algorithm* to prevent spurious space warnings 58
\@specialsection: Suppress warnings about \vspace 91
v1.67
General: Patching lstlisting and lstlisting* to prevent spurious space warnings 58
\@parfont: Deleted redefinitions of sections 112
\@specialsection: Paragraph inside group does not print its argument. Added a bugfix 91
v1.68
General: New command for unindent paras 111
\@specialsection: Deleted grouping altogether 91

v1.69
General: No dots for unindented paragraphs . . . 111
\@printendtopmatter: Deleted grouping . . . 103
\@specialsection: Changed dot to colon for sigplan . . . 91
\ACM@linecountR: Do not increase numbers in one column format . 105
\ccsdesc@parse: Use math right arrow in text . . . 81
v1.71
\l@subsubsection: Bug fixed (thanks to Andrew Black) . . . 50
v1.72
\author: Added \detokenize (Kuldeep S. Meel) . . . 73
\maketitle: Do not andify authors for pdf metadata (Scott Pakin) . . . 87
v1.73
General: Patching minted and minted* to prevent spurious space warnings . . . 58
\@ACM@checkaffil: Added macro . . 98
\@ACM@resetaffil: Added macro . . 97
\@mkauthors@i: Check the presence of required elements for affiliations . . . 98
\@mkauthors@iii: Check the presence of required elements for affiliations . . . 99
\@mkauthors@iv: Check the presence of required elements for affiliations . . . 100
\city: Check the presence in affil . . 95
\country: Check the presence in affil 95
\if@ACM@citypresent: Added macro 97
\if@ACM@countrypresent: Added macro . . . 97
\if@ACM@instpresent: Added macro 97
\institution: Check the presence in affil . . . 95
\maketitle: Do not check again the presense of address fields . . . 87
v1.74
General: Changed the order of font loading . . . 57
v1.75
\@ACM@checkaffil: Changed warning to error for country . . . 98
\@beginmaketitlehook: Introduced macro . . . 87
\AtBeginMaketitle: Introduced macro . . . 87
\maketitle: Added \@beginmaketitlehook . . . 87
v1.76
General: Moved hyperxmp before hyperref, see https://github.com/borisveytsman/acmart/issues/425 . . . 51
\author: Added code for orcid links . 73
\if@ACM@pbalance: Added macro . . 39
\maketitle: Put \par inside group for keywords . . . 87
\orcid: Added code for orcid links . . 74
standardpagestyle: Fixed bug with no line numbers for nonacm . . . 106
v1.77
\@mkauthorsaddresses: New separator of institutions . . . 101
v1.78
\@mkauthors@i: Unboxing \mktitle@bx . . . 98
\@mkauthors@iii: Unboxing \mktitle@bx . . . 99
\@mkteasers: Unboxing \mktitle@bx . . . 102
\@printtopmatter: Added processing the overflowing title box . . . 92
\@specialsection: Again suppressed \vspace warning . . . 91
v1.82
\anon: Introduced macro . . . 87
v1.83
General: Use babel for multilanguage papers . . . 46
\@mkabstract: I13n . . . 102
\@mktitle@i: Added \translatedtitle and \translatedsubtitle . . . 94
\@mktitle@iii: Added \translatedtitle and \translatedsubtitle . . . 94
\@mktitle@iv: Added \translatedtitle and \translatedsubtitle . . . 95
\@mktranslatedabstract: Added macro . . . 102
\@mktranslatedkeywords: Added macro . . . 75
\@translatedabstracts: Added macro . . . 47
\@translatedkeywords: Added macro . . . 47
\@translatedsubtitle: Added macro . . . 47
\@translatedtitle: Added macro . 47

\ACM@lang@check: Added macro . . . 47
\ACM@languages: Introduced macro . 40
\maketitle: I13n 87
translatedabstract: Added macro 47
\translatedkeywords: Added macro 47
\translatedsubtitle: Added macro 47
\translatedtitle: Added macro . . 47
v1.85
General: Added CC licenses 82
\@acmengagemetadata: Introduced macro 87
\@copyrightowner: Added CC licenses 83
\@copyrightpermission: Added CC licenses 84
\@parfont: Added: acmengage 112
\@typesetengagemetadata: Introduced macro 104
\if@ACM@engage: Introduced macro . 41
\maketitle: acmengage 87
\setcctype: Added macro 83
\setengagemetadata: Introduced macro 87
v1.86
\country: Error if country is empty . 95
standardpagestyle: Special treatment of ACM Engage materials 106
v1.87
General: Added 'framed' package for acmcp 44
No numbering sections for ACMCP 113
\@ACM@color@frame: Introduced macro 80
\@ACM@copyright@check@cc: Added macro 83
\@copyrightpermission: CC licenses now are allowed only for non-acm or ACM engage publications 84
\@mkauthors@i: Special treatment for acmcp 98
\@mktitle@i: Special treatment for acmcp 94
\acmArticleType: Introduced macro 79
\acmCodeDataLink: Added possibility to have several links 80
Introduced macro 80
\acmDataLink: Introduced macro . . 80
Now this is the same as the code link 80
\if@ACM@acmcp: Introduced macro . . 41
firstpagestyle: Special treatment for acmcp 108
\maketitle: CC license are allowed for non-acm publications 87
\set@ACM@acmcpbox: Added macro . 90
standardpagestyle: Special treatment of ACMCP 106
v1.88
\@mktitle@i: Moved down title for acmcp 94
v1.89
General: Added 'zref-savepos' package for acmcp 44
\@ACM@acmcp@delta: Added dimen . 44
\@ACM@badge@skip: Redefined macro 77
\@ACM@color@frame: Added saving the position of the bottom 80
\@acmBadgeL: Introduced macro . . . 77
\@acmBadgeR: Introduced macro . . . 77
\@mktitle@i: Moved badges to top header 94
Moved up acmcp title 94
\@mktitle@iii: Moved badges to top header 94
\acmBadge: Added macro 77
\acmBadgeL: Redefined macro 77
\acmBadgeR: Redefined macro 77
\if@ACM@badge: Deleted macro 76
firstpagestyle: Moved badges here 108
\set@ACM@acmcpbox: Added logo . . . 90
Added zref position of the bottom 90
v1.91
\acmContributions: Restored the macro 80
standardpagestyle: Redesigned ACMP labels 106
v1.93
General: Added PACMSE journal option 37
v2.00
General: Deleted acmPrice 82
\@ACM@copyright@check@cc: Moved to warning 83
\@copyrightowner: Changed wording 83
\@folio@ht: Obsoleted macro 108
\@folio@max: Obsoleted macro 108
\@folio@voffset: Obsoleted macro . 108
\@folio@wd: Obsoleted macro 108
\@folioblob: Obsoleted macro 108
\@sect@kernel: Added macro 43
\@ssect@kernel: Added macro 43
\@startsection@kernel: Added macro 42
\@xsect@kernel: Added macro 42
\acmPrice: Deleted macro 76
firstpagestyle: Deleted blobs 108
\maketitle: Added "ACM" for papers 87
Deleted acmPrice 87

v2.01
General: Documentation update: POMACS uses acmsmall 37
\acmBooktitle: Moved default conference title to conference setting 72
\acmPrice: Now the macro produces a warning 76
v2.02
\acmConference: Moved here setting the conference title for bibstrip . . 71
v2.03
General: Added documentation about samples 37
\acmConference: Made setting bibstrip overriding journal 71
\if@ACM@journal@bibstrip@or@tog: Introduced macro 41
firstpagestyle: Special treatment of tog 108
\maketitle: Special processing for conferences in TOG 87
standardpagestyle: Special treatment of ACM TOG 106
v2.04
General: eISSN is printed, rather than pSSN 71
\@copyrightowner: Changed wording 83
v2.06
\@mkauthorsaddresses: \streetaddress and \postcode now produce warnings 101
\postcode: We now do not collect postal information anymore 95
\streetaddress: We now do not collect postal information anymore 95
v2.08
\@parfont: Deleted uppercasing . . . 112
v2.09
General: Saved the old definitions (Ulrike's code 42
\@ACM@copyright@check@cc: Deleted macro 83
\@copyrightpermission: Deleted checking whether CC licenses are allowed 84
v2.10
General: Added tocindent for paragraphs and subparagraphs . 112
v2.11
\@copyrightpermission: Changed URL for CC licenses 84
\maketitle: Deleted conference date from bibstrip 87
v2.12
General: Removed 'textcase' package 44
Use unicode-math and libertinus for Unicode engines 57
v2.13
General: Added mathcal in unicode mode 57
New warnings about lack of descriptions 58
v2.14
\ACM@origparagraph: Added check whether the user changed \paragraph 119
\ACM@origsection: Added check whether the user changed \section 119
\ACM@origsubsection: Added check whether the user changed \subsection 119
\ACM@origsubsubsection: Added check whether the user changed \subsubsection 119
v2.15
General: Added symbols in unicode mode 57
\@@authornotemark: Suppressed spurious overfull warning 102
\@authornotemark: Suppressed spurious overfull warning 102

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
